**Feedforward and Feedback Processes in Vision** Hulusi Kafaligonul, Bruno G. Breitmeyer, Haluk Öğmen, 2015-07-10 The visual system consists of hierarchically organized distinct anatomical areas functionally specialized for processing different aspects of a visual object Felleman Van Essen 1991 These visual areas are interconnected through ascending feedforward projections descending feedback projections and projections from neural structures at the same hierarchical level Lamme et al 1998 Accumulating evidence from anatomical functional and theoretical studies suggests that these three projections play fundamentally different roles in perception However their distinct functional roles in visual processing are still subject to debate Lamme Roelfsema 2000 The focus of this Research Topic is the roles of feedforward and feedback projections in vision Even though the notions of feedforward feedback and reentrant processing are widely accepted it has been found difficult to distinguish their individual roles on the basis of a single criterion We welcome empirical contributions theoretical contributions and reviews that fit into any one or a combination of the following domains 1 their functional roles for perception of specific features of a visual object 2 their contributions to the distinct modes of visual processing e g pre attentive vs attentive conscious vs unconscious 3 recent techniques methodologies to identify distinct functional roles of feedforward and feedback projections and corresponding neural signatures We believe that the current Research Topic will not only provide recent information about feedforward feedback processes in vision but also contribute to the understanding fundamental principles of cortical processing in general

**Machine Learning for Beginners** Alec Gilliam,2018-05-09 Machine Learning Machine learning is the ability of artificial intelligence to learn and adapt without being explicitly programmed to

perform a pre prescribed outcome It is a machine s ability to act on its own to learn Many forms of artificial intelligence use a wide variety of tactics to employ this including pattern recognition and unsupervised learning algorithms Currently there is a lot of excitement and focus on machine learning in the world of programming as it is often interpreted to imply a limitless future in artificial intelligence a world in which machines could adapt and respond to a wide variety of stimuli and factors without direct programming response from a human A world in which machines could learn and adapt on their own Often machine learning is seen as the missing human element in machines the ability for machines to start to fill the gap between what makes us human and what makes machines a sense of responsiveness and flexibility in a given environment and a set of circumstances By and large the goal of learning is to be able to generalize to take a set of lived circumstances and to be able to extrapolate a sense of patterning about what the future holds and how the person should respond to similar given situations Machine learning is similar it is the attempt to program machines so that they can generalize about future possibilities and probabilities based on data sets In short machine learning is the quest to get machines to think like humans This takes a wide variety of forms and is used for a wide variety of purposes In the following book we will explore the history of machine learning the academic and scientific elements that make up the study as well as touching on this moral and philosophical space that they occupy In this book you will find What is Machine Learning The History of Machine Learning Examples of Machine Learning How Does Machine Learning Work Common Approaches and Terms in Machine Learning Theoretical Computer Science Computational Learning Theory Association Rule Learning Pattern Recognition Deep Learning Induction Logic Reasoning Neural networks Expert Systems Naive Bayes Systems Unsupervised and supervised learning algorithms Decision Trees Random Decision Forests The Moral and Philosophical Implications of Machine Learning
