Design And Implementation Of Model Predictive Control:

Model Predictive Control System Design and Implementation Using MATLAB® Liuping Wang,2009-02-14 Model Predictive Control System Design and Implementation Using MATLAB proposes methods for design and implementation of MPC systems using basis functions that confer the following advantages continuous and discrete time MPC problems solved in similar design frameworks a parsimonious parametric representation of the control trajectory gives rise to computationally efficient algorithms and better on line performance and a more general discrete time representation of MPC design that becomes identical to the traditional approach for an appropriate choice of parameters After the theoretical presentation coverage is given to three industrial applications The subject of quadratic programming often associated with the core optimization algorithms of MPC is also introduced and explained The technical contents of this book is mainly based on advances in MPC using state space models and basis functions This volume includes numerous analytical examples and problems and MATLAB programs and exercises **Incremental Model Predictive Control System Design and Implementation Using MATLAB/Simulink** Xin Lin,2013 The integral and model predictive controller MPC drive controlled outputs to their desired targets and this thesis addresses the problem of integral controller incremental and integral MPC when tracking the constant or inconstant references Design and implementation of the MPC under MATLAB Simulink environment are discussed both in incremental and integral form Also one CSTR example is presented to compare the control performances among different integral controller and MPCs **Learning-based Model Predictive Control with closed-loop guarantees** Raffaele Soloperto,2023-11-13 The performance of model predictive control MPC largely depends on the accuracy of the prediction model and of the constraints the system is subject to However obtaining an accurate knowledge of these elements might be expensive in terms of money and resources if at all possible In this thesis we develop novel learning based MPC frameworks that actively incentivize learning of the underlying system dynamics and of the constraints while ensuring recursive feasibility constraint satisfaction and performance bounds for the closed loop In the first part we focus on the case of inaccurate models and analyze learning based MPC schemes that include in addition to the primary cost a learning cost that aims at generating informative data by inducing excitation in the system In particular we first propose a nonlinear MPC framework that ensures desired performance bounds for the resulting closed loop and then we focus on linear systems subject to uncertain parameters and noisy output measurements In order to ensure that the desired learning phase occurs in closed loop operations we then propose an MPC framework that is able to guarantee closed loop learning of the controlled system In the last part of the thesis we investigate the scenario where the system is known but evolves in a partially unknown environment In such a setup we focus on a learning based MPC scheme that incentivizes safe exploration if and only if this might yield to a performance improvement **Model Predictive Control of Wind Energy Conversion Systems** Venkata Yaramasu,Bin Wu,2016-12-19 Model Predictive Control of Wind Energy Conversion Systems
