**Pattern** Andrea Gleiniger, Georg Vrachliotis, 2012-11-05 As models and paradigms patterns have been helping to orient architects since the Middle Ages But patterns are also the basis of the history of ornament an aesthetic phenomenon that links all times and cultures at a fundamental level Ornament and hence pattern as well was abolished by the avant garde in the first half of the twentieth century but the notion of pattern has taken on new meaning and importance since the 1960s Complexity research has ultimately shown that even highly complex dynamic patterns may be based on simple behavioral rules and that has allowed the notions of pattern and pattern formation to take on new meanings that are also central for architecture Today the use of generative computerized methods is opening up new ways of talking about an idea that is becoming increasingly abstract and dynamic Pattern explores the question what are the notions of pattern that must be discussed in the context of contemporary architecture

Architectural Intelligence Molly Wright Steenson, 2022-11-01 Architects who engaged with cybernetics artificial intelligence and other technologies poured the foundation for digital interactivity In Architectural Intelligence Molly Wright Steenson explores the work of four architects in the 1960s and 1970s who incorporated elements of interactivity into their work Christopher Alexander Richard Saul Wurman Cedric Price and Nicholas Negroponte and the MIT Architecture Machine Group all incorporated technologies including cybernetics and artificial intelligence into their work and influenced digital design practices from the late 1980s to the present day Alexander long before his famous 1977 book A Pattern Language used computation and structure to visualize design problems Wurman popularized the notion of information architecture Price designed some of the first intelligent buildings and Negroponte experimented with the ways people experience artificial intelligence even at architectural scale Steenson investigates how these architects pushed the boundaries of architecture and how their technological experiments pushed the boundaries of technology What did computational cybernetic and artificial intelligence researchers have to gain by engaging with architects and architectural problems And what was this new space that emerged within these collaborations At times Steenson writes the architects in this book characterized themselves as anti architects and their work as anti architecture The projects Steenson examines mostly did not result in constructed buildings but rather in design processes and tools computer programs interfaces digital environments Alexander Wurman Price and Negroponte laid the foundation for many of our contemporary interactive practices from information architecture to interaction design from machine learning to smart cities
