Open Source and Proprietary Software Chris Nosko,Daniel D. Garcia-Swartz,Anne Layne-Farrar,2014 The open source software development model has been hailed as the most significant change in computing since Apple played David to IBM s Goliath Yet enterprises dedicated to bringing open source into the mainstream of the information economy have had a rough time finding ways to stay afloat financially While traditional software companies can generate revenue from the sale of their intellectual property this is hard to do with open source software because the developers retain only limited rights in the products The approach adopted by some open source companies is to honor open source in spirit while inching toward fees for the use of intellectual property These firms have created hybrid business models that combine elements of free code with code that is licensed for cash Ironically in the wake of the dot com bust even firms licensing software in traditional ways have been struggling to cope Many of these proprietary

software makers have found they can better satisfy their customers and generate more profit by adopting aspects of the open source development process We take a closer look at both kinds of companies to illustrate how very different sorts of developers are moving towards a fruitful convergence We conclude that open source companies are more likely to succeed if they can use open source products as entree into domains protected by traditional intellectual property and that proprietary companies can benefit from open source software development without abandoning revenues from intellectual property Open source and proprietary development models remain distinct but we predict that less software will be licensed at either extreme in the future Open Source Development, Communities and Quality Barbara Russo,Ernesto Damiani,Scott Hissam,Björn Lundell,Giancarlo Succi,2008-07-11 We are very pleased to introduce Open Source Development Communities and Quality The International Conference on Open Source Systems has come to its fourth edition OSS 2008 Now Free Libre and Open Source software is by all means now one of the most relevant subjects of study in several disciplines ranging from information technology to social sciences and including also law business and political sciences There are several conference tracks devoted to open source software with several publications appearing in high quality journals and magazines OSS 2008 has been organized with the purpose of being the reference venue for those working in this area being the most prominent conference in this area For this th reason OSS 2008 has been located within the frameworks of the 20 World Computer Congress WCC 2008 in Milan the largest event of IFIP in 2008 We believe that this conference series and the IFIP working group it represents can play an important role in meeting these challenges and hope that this book will become a valuable contribution to the open source body of research **The Open Source Handbook** Michael R.
