 fundamental hardware used in modern computers The only pre requisite is algebra so it can be taken by college freshman or
 sophomore students or even used in Advanced Placement courses in high school This book presents both the classical
 approach to digital system design i e pen and paper in addition to the modern hardware description language HDL design
 approach computer based This textbook enables readers to design digital systems using the modern HDL approach while
 ensuring they have a solid foundation of knowledge of the underlying hardware and theory of their designs This book is
 designed to match the way the material is actually taught in the classroom Topics are presented in a manner which builds
 foundational knowledge before moving onto advanced topics The author has designed the content with learning goals and
 assessment at its core Each section addresses a specific learning outcome that the learner should be able to do after its
 completion The concept checks and exercise problems provide a rich set of assessment tools to measure learner performance
 on each outcome This book can be used for either a sequence of two courses consisting of an introduction to logic circuits
 Chapters 1 7 followed by logic design Chapters 8 13 or a single accelerated course that uses the early chapters as reference

Uncertainty and Imprecision in Decision Making and Decision Support: Cross-Fertilization, New Models and Applications Krassimir T. Atanassov, Janusz Kacprzyk, Andrzej Kałuszek, Maciej Krawczak, Jan Owsinski, Sotir Sotirov, Evdokia Sotirova, Eulalia Szmidt, Sławomir Zadrozny, 2017-10-06 This book presents selected papers from two important conferences held on October 12 14 2016 in Warsaw Poland the Fourteenth National Conference of Operational and Systems Research BOS 2016 one of the premiere conferences in the field of operational and systems research not only in Poland but also at the European level and the Fifteenth International Workshop on Intuitionistic Fuzzy Sets and General Nets IWIFSGN 2016 one of the foremost conferences on fuzzy logic notably addressing extensions of the traditional fuzzy sets as well as the Generalized Nets GNs a powerful extension of the traditional Petri net paradigm The scope of the BOS conferences includes all types of problems related to systems modeling systems analysis broadly perceived operational research optimization decision making and decision support to name but a few In all these areas virtually all models used have to take into account not only uncertainty in its traditional sense but also imprecision of information That is in addition to traditional probabilistic and statistical tools and techniques the use of methods based on fuzzy sets can also be sensible Even more so employing certain extensions of the classic concept of a fuzzy

set can be very useful Applying intuitionistic fuzzy sets which are at the core of the IWIFSGN conferences is a good example Both conferences BOS 2016 and IWIFSGN 2016 offered ideal venues for the exchange of ideas cross fertilization and mutual inspiration
