A Tradecraft Primer U. S. Government,2009-03-02 Using the analytic techniques contained in this primer will assist analysts in dealing with the perennial problems of intelligence the complexity of international developments incomplete and ambiguous information and the inherent limitations of the human mind Understanding the intentions and capabilities of adversaries and other foreign actors is challenging especially when either or both are concealed Moreover transnational threats today pose even greater complexity in that they involve multiple actors including nonstate entities that can adapt and transform themselves faster than those who seek to monitor and contain them Finally globalization has increased the diversity of outcomes when complex interactive systems such as financial flows regional economies or the international system as a whole are in flux The first hurdle for analysts is identifying the relevant and diagnostic information from the increasing volume of ambiguous and contradictory data that is acquired through open source and clandestine means Analysts must also pierce the shroud of secrecy and sometimes deception that state and nonstate actors use to mislead A systematic approach that considers a range of alternative explanations and outcomes offers one way to ensure that analysts do not dismiss potentially relevant hypotheses and supporting information resulting in missed opportunities to warn Cognitive and perceptual biases in human perception and judgment are another important reason for analysts to consider alternatives As Richards Heuer and others have argued all individuals assimilate and evaluate information through the medium of mental models sometimes also called frames or mind sets These are experience based constructs of assumptions and expectations both about the world in general and more specific domains These constructs strongly influence what information analysts will accept that is data that are in

accordance with analysts unconscious mental models are more likely to be perceived and remembered than information that is at odds with them Mental models are critical to allowing individuals to process what otherwise would be an incomprehensible volume of information Yet they can cause analysts to overlook reject or forget important incoming or missing information that is not in accord with their assumptions and expectations Seasoned analysts may be more susceptible to these mind set problems as a result of their expertise and past success in using time tested mental models The key risks of mind sets are that analysts perceive what they expect to perceive once formed they are resistant to change new information is assimilated sometimes erroneously into existing mental models and conflicting information is often dismissed or ignored

Restructuring Structured Analytic Techniques in Intelligence, 2017 Structured analytic techniques SATs are intended to improve intelligence analysis by checking the two canonical sources of error systematic biases and random noise Although both goals are achievable no one knows how close the current generation of SATs comes to achieving either of them We identify two root problems 1 SATs treat bipolar biases as unipolar As a result we lack metrics for gauging possible overshooting and have no way of knowing when SATs that focus on suppressing one bias e.g. overconfidence are triggering the opposing bias e.g. underconfidence 2 SATs tacitly assume that problem decomposition e.g. breaking reasoning into rows and columns of matrices corresponding to hypotheses and evidence is a sound means of reducing noise in assessments But no one has ever actually tested whether decomposition is adding or subtracting noise from the analytic process and there are good reasons for suspecting that decomposition will on balance degrade the reliability of analytic judgment The central shortcoming is that SATs have not been subject to sustained scientific of the sort that could reveal when they are helping or harming the cause of

delivering accurate assessments of the world to the policy community
