

## Investigation: Gross Anatomy of the Cat

17

1. A curtain of fat lies over most of the organs of the abdominal cavity; this is called the **greater omentum**. It can be removed so that organs are visible.

2. The **liver** is the largest organ in the abdominal cavity, and it is divided into lobes.

3. Push the liver upward to locate the **gallbladder** that lies underneath and find the **bile duct**, which connects the gallbladder to the **duodenum** of the small intestine.

4. Locate the **diaphragm** which lies above the liver and separates the abdominal cavity from the thoracic cavity.

5. The lungs are located on either side of the heart in the thoracic cavity. Are the lungs superior (above) or inferior (below) to the diaphragm?

6. The lungs connect to the **trachea**, or the **windpipe**. It has cartilage rings that give it a ridged appearance. Locate the trachea and follow it toward the mouth. You will eventually find a reinforced muscular area, the **larynx**, which is the cat's voice box (or "meow box").

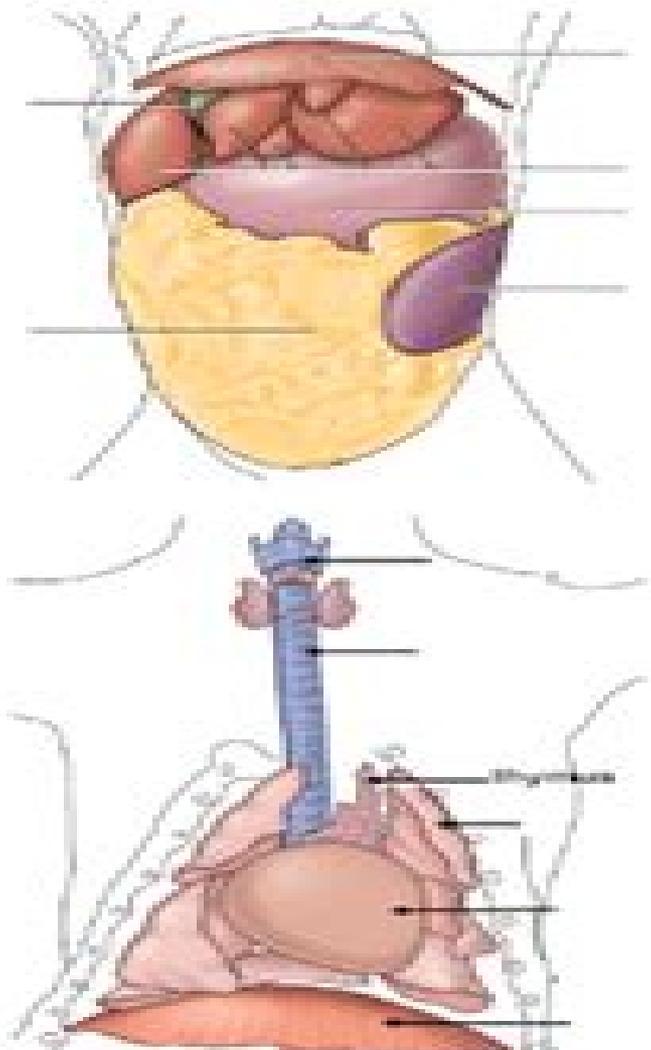

What do you think will happen to the lungs if air is blown into the trachea? (Your instructor may demonstrate this for you.)

7. Locate the point at which the **esophagus** pierces the diaphragm and trace the esophagus to the stomach. Wiggling the stomach may help you find the esophagus. Trace it upward to where it is visible near the trachea.

Describe the appearance of the diaphragm, to what body system does it belong?

Describe the difference between the esophagus and the trachea.

What happens when air is blown into the trachea?

Label the diagrams.
