Causal Models and Intelligent Data Management Alex Gammerman, 2012-12-06 Data analysis and inference have traditionally been research areas of statistics However the need to electronically store manipulate and analyze large scale high dimensional data sets requires new methods and tools new types of databases new efficient algorithms new data structures etc in effect new computational methods This monograph presents new intelligent data management methods and tools such as the support vector machine and new results from the field of inference in particular of causal modeling In 11 well structured chapters leading experts map out the major tendencies and future directions of intelligent data analysis The book will become a valuable source of reference for researchers exploring the interdisciplinary area between statistics and computer science as well as for professionals applying advanced data analysis methods in industry and commerce Students and lecturers will find the book useful as an introduction to the area

**Bayesian Nets and Causality: Philosophical and Computational Foundations** Jon Williamson, 2005 Bayesian nets are used in artificial intelligence as a calculus for causal reasoning enabling machines to make predictions perform diagnoses take decisions and even to discover causal relationships This book brings together how to automate reasoning in artificial intelligence and the nature of causality and probability in philosophy

**Advances in Knowledge Discovery and Data Mining** David Cheung, Graham J. Williams, Qing Li, 2003-06-29 This book constitutes the refereed proceedings of the 5th Pacific Asia Conference on Knowledge Discovery and Data Mining PAKDD 2001 held in Hong Kong China in April 2001 The 38 revised full papers and 22 short papers presented were carefully reviewed and selected from a total of 152 submissions The book offers topical sections on Web mining text mining applications and tools concept hierarchies feature selection interestingness sequence mining spatial and temporal mining association mining classification and rule induction clustering and advanced topics and new methods

*PRICAI 2014: Trends in Artificial Intelligence* Duc-Nghia Pham, Seong-Bae Park, 2014-11-12 This book constitutes the refereed proceedings of the 13th Pacific Rim Conference on Artificial Intelligence PRICAI 2014 held in Gold Coast Queensland Australia in December 2014 The 74 full papers and 20 short papers presented in this volume were carefully reviewed and selected from 203 submissions The topics include inference reasoning robotics social intelligence AI foundations applications of AI agents Bayesian networks neural networks Markov networks bioinformatics cognitive systems constraint satisfaction data mining and knowledge discovery decision theory evolutionary computation games and interactive entertainment heuristics knowledge acquisition and ontology knowledge representation machine learning multimodal interaction natural language processing planning and scheduling probabilistic

Innovations in Bayesian Networks Dawn E. Holmes, 2008-09-10 Bayesian networks currently provide one of the most rapidly growing areas of research in computer science and statistics In compiling this volume we have brought together contributions from some of the most prestigious researchers in this field Each of the twelve chapters is self contained Both theoreticians and application scientists engineers

in the broad area of artificial intelligence will find this volume valuable It also provides a useful sourcebook for Graduate students since it shows the direction of current research

*Causality* Judea Pearl,2009-09-14 Causality offers the first comprehensive coverage of causal analysis in many sciences including recent advances using graphical methods Pearl presents a unified account of the probabilistic manipulative counterfactual and structural approaches to causation and devises simple mathematical tools for analyzing the relationships between causal connections statistical associations actions and observations The book will open the way for including causal analysis in the standard curriculum of statistics artificial intelligence

**A Guided Tour of Artificial Intelligence Research** Pierre Marquis,Odile Papini,Henri Prade,2020-05-08 The purpose of this book is to provide an overview of AI research ranging from basic work to interfaces and applications with as much emphasis on results as on current issues It is aimed at an audience of master students and Ph D students and can be of interest as well for researchers and engineers who want to know more about AI The book is split into three volumes the first volume brings together twenty three chapters dealing with the foundations of knowledge representation and the formalization of reasoning and learning Volume 1 Knowledge representation reasoning and learning the second volume offers a view of AI in fourteen chapters from the side of the algorithms Volume 2 AI Algorithms the third volume composed of sixteen chapters describes the main interfaces and applications of AI Volume 3 Interfaces and applications of AI

forum for exchange of ideas on problems of reasoning under uncertainty During those 15 years UAI has moved from a little noticed niche at the edge of the field solidly into the mainstream of artificial intelligence research and practice Research first presented at UAI has contributed significantly to advances in a number of related fields and has found application in a wide variety of domains The UAI conference has acquired a reputation for excellence and the proceedings have become an important reference source for high quality work in the field American Book Publishing Record ,1999 **Computation, Causation, and Discovery** Clark N. Glymour, Gregory Floyd Cooper, 1999 In science business and policymaking anywhere data are used in prediction two sorts of problems requiring very different methods of analysis often arise The first problems of recognition and classification concerns learning how to use some features of a system to accurately predict other features of that system The second problems of causal discovery concerns learning how to predict those changes to some features of a system that will result if an intervention changes other features This book is about the second much more difficult type of problem Typical problems of causal discovery are How will a change in commission rates affect the total sales of a company How will a reduction in cigarette smoking among older smokers affect their life expectancy How will a change in the formula a college uses to award scholarships affect its dropout rate These sorts of changes are interventions that directly alter some features of the system and perhaps and this is the question indirectly alter others The contributors discuss recent research and applications using Bayes nets or directed graphic representations including representations of feedback or recursive systems The book contains a thorough discussion of foundational issues algorithms proof techniques and applications to economics physics biology educational research and other areas **A Planning Methodology for Intelligent Urban Transportation Systems** Adib K.
