NEURAL NETWORKS, FUZZY SYSTEMS AND EVOLUTIONARY ALGORITHMS : SYNTHESIS AND APPLICATIONS

RAJASEKARAN, S.,PAI, G. A. VIJAYALAKSHMI,2017-05-01 The second edition of this book provides a comprehensive introduction to a consortium of technologies underlying soft computing an evolving branch of computational intelligence which in recent years has turned synonymous to it The constituent technologies discussed comprise neural network NN fuzzy system FS evolutionary algorithm EA and a number of hybrid systems which include classes such as neuro fuzzy evolutionary fuzzy and neuro evolutionary systems The hybridization of the technologies is demonstrated on architectures such as fuzzy backpropagation network NN FS hybrid genetic algorithm based backpropagation network NN EA hybrid simplified fuzzy ARTMAP NN FS hybrid fuzzy associative memory NN FS hybrid fuzzy logic controlled genetic algorithm EA FS hybrid and evolutionary extreme learning machine NN EA hybrid Every architecture has been discussed in detail through illustrative examples and applications The algorithms have been presented in pseudo code with a step by step illustration of the same in problems The applications demonstrative of the potential of the architectures have been chosen from diverse disciplines of science and engineering This book with a wealth of information that is clearly presented and illustrated by many examples and applications is designed for use as a text for the courses in soft computing at both the senior undergraduate and first year postgraduate levels of computer science and engineering It should also be of interest to researchers and technologists desirous of applying soft computing technologies to their respective fields of work

Origins of Human Socialization Donald W. Pfaff,2020-11-06 *Origins of Human Socialization* introduces a new concept on the origins of basic human instinct The book combines the three disciplinary approaches including neuroscience paleoanthropology and developmental psychology as an intertwined foundation for prosocial behavior It argues that humans have the basic brain mechanisms for prosocial activity offering new insights into more sophisticated social behavior It also examines both visual and auditory systems in both humans and animals to explain the evolution of social

interactions Written by world renowned researcher Dr Donald Pfaff this book is the first to explore why we have basic social instinct and how it works For centuries researchers have argued over the foundations of human behavior in society Anthropologists point to transitions from hunter gathers to urban dwellers leading to human domestication Developmental psychologists highlight social competences in babies Neuroscientists focus on specific genetic and neurochemical mechanisms that attribute to social behavior This book brings all of these important areas together in an interdisciplinary approach that helps readers understand how they are linked Introduces recent discoveries regarding genes and their association with brain growth Outlines the fundamentals of brain circuitry that underlies social behavior Explains the connection between loneliness and reduced anti inflammatory responses Reviews how gene expression encourages various forms of social behavior

Molecular Photofitting Tony Frudakis Ph.D.,2010-07-19 In the field of forensics there is a critical need for genetic tests that can function in a predictive or inferential sense before suspects have been identified and or for crimes for which DNA evidence exists but eye witnesses do not Molecular Photofitting fills this need by describing the process of generating a physical description of an individual from the analysis of his or her DNA The molecular photofitting process has been used to assist with the identification of remains and to guide criminal investigations toward certain individuals within the sphere of prior suspects Molecular Photofitting provides an accessible roadmap for both the forensic scientist hoping to make use of the new tests becoming available and for the human genetic researcher working to discover the panels of markers that comprise these tests By implementing population structure as a practical forensics and clinical genomics tool Molecular Photofitting serves to redefine the way science and history look at ancestry and genetics and shows how these tools can be used to maximize the efficacy of our criminal justice system Explains how physical descriptions of individuals can be generated using only their DNA Contains case studies that show how this new forensic technology is used in practical application Includes over 100 diagrams tables and photos to illustrate and outline complex concepts

The Jaina Doctrine of Karma and the Science of Genetics Sohan Raj Tater, 2009 We have two kinds of determinants of body processes and behaviour of organisms: the Karma and the genes, the two seemingly diverse systems performing similar functions. This book makes a comparative study of the doctrine of Karma and the science of genetics. Explaining the concept of Karma as known to various Indian philosophies including Jainism, it deals with the concept of life in Jaina philosophy and goes on to describe the classification, bondage, fruition, and annihilation of Karma. Further discussing the developments in genetic science along with its important aspects, it presents a comparative study of Karma and genes and brings out the fact that Karmas are the cause and genes are their effects.
