

## Chapter 11 Introduction to Genetics

## Section Review 11-1

## Reviewing Key Concepts

Short Answer On the lines provided, answer the following questions.

1. State Mendel's principle of dominance.

Mendel's principle of dominance states that some alleles are dominant + others are recessive.

2. Which two combinations of alleles could produce a trait controlled by a dominant allele?

A + trait if there are 2 dominant or 1 dominant + 1 recessive alleles present.

3. What combination of alleles could produce a trait controlled by a recessive allele?

A + trait controlled by a recessive allele will be produced only when 2 recessive alleles are present.

4. Explain segregation of alleles, using pea plant traits in your example.

Segregation is the process during gamete formation in which the two alleles are separated from each other so that each gamete carries only a single copy of each gene.

## Reviewing Key Skills

5. Applying Concepts Explain how Mendel's experiments would have been different if he had not worked with true-breeding plants.

True breeding plants allowed Mendel to pinpoint the cause of variation in traits b/c he could control which plants bred. w/o true-breeding plants, Mendel would not have been able to draw his conclusion b/c there would be too many variables.

6. Comparing and Contrasting Explain the difference between cross-pollination and self-pollination in plants.

Cross-pollination is the process of one plant fertilizing another, while self-pollination occurs when a plant fertilizes itself.

7. Calculating One fourth of the plants resulting from a certain cross are expected to show a trait controlled by a recessive allele. If 675 plants resulting from the cross display a trait controlled by a dominant allele, how many plants will show the trait controlled by the recessive allele?

225 plants will show the trait controlled by the recessive allele.

8. Applying Concepts If one of the plants used in the  $F_1$  cross had  $TT$  alleles and was combined with a plant with  $Tt$  alleles, would the trait controlled by the recessive allele have been produced in the resulting  $F_2$  generation? Explain your answer.

The trait controlled by the recessive allele would not have been produced in the resulting  $F_2$  generation. Both  $F_1$  generation plants need to have  $Tt$  allele combinations for the trait controlled by the recessive allele to be produced in one of the  $F_2$  generation plants.

**Student Workbook for Essentials of Anatomy and Physiology** Valerie C. Scanlon, Tina Sanders, 1998-10 The ideal companion to Essentials of Anatomy and Physiology 5th Edition or as a stand alone study tool

**Basic Genetics** Robert F. Weaver, Philip W. Hedrick, 1995 This text provides a balanced coverage of clinical and molecular genetics Experimental highlights and extensive use of learning aids are used throughout After a broad introduction to the topic the book is divided into 3 parts Part one explores Mendelian genetics including chromosomes and genetic linkage Part two looks at molecular genetics covering chemistry of a gene repluation and recombination of genes and transcription and its control in prokaryotes The final part introduces population genetics and discusses some of their extensions and applications

**TEXTBOOK OF ANIMAL BEHAVIOUR, THIRD EDITION** MANDAL, FATIK BARAN, 2015-09-18 This well accepted book now in its Third Edition is an extension of the previous edition The text has further enriched with more information to understand animal behaviour coherently and scientifically The book attempts to provide a reasonably suitable account of animal behaviour for undergraduate as well as postgraduate students Although

behaviour of animals has fascinated people for a long time. Behavioural biology has been incorporated in the syllabi very recently. The study of behaviour received its important boost from the work of Charles Darwin who used the term instinct to refer to the natural behaviour of animals. In the 1930s a comprehensive theory of animal behaviour emerged through the work of Konrad Lorenz and later of Niko Tinbergen. Biological study of behaviour in fact came of age as a science when Lorenz, Tinbergen and Karl von Frisch received the Nobel Prize for their contribution to science. Observing and describing exactly what animals do is fascinating and scientific analysis of their behaviour is significant for several reasons. Each species tends to have an array of stereotyped behaviours, some of which are shared with related species but others are unique. Ecology, natural selection, macroevolution, microevolution and genes constitute the foundation of animal behaviour. Various animal groups exhibit diverse strategies for their survival and reproduction which are discussed in this book. The book is primarily intended for the students of B.Sc. Zoology, Life Science for their courses. It would be useful for the researchers in the field of animal behaviour and conservation biologists. It would also attract students who are pursuing courses in Sociology and Anthropology. Key features: Presents a well-balanced view of ethology; Discusses the current development in the field; Includes a glossary of important terms; Offers chapter-end questions to check the students' understanding of the concept.

**Textbook of Pleural Diseases Second Edition** Richard W. Light, Y. C. Gary Lee, 2008-04-25 This internationally renowned reference work is a fully updated and expanded second edition of the most comprehensive title available on pleural diseases. Building on the many strengths of the highly respected first edition, the book features a detailed yet lucid basic science section to support understanding of the physiological and pathophysiological mechanisms that underlie diseases of the pleura. This is followed by a wide-ranging series of clinical chapters discussing both familiar and less common aspects of pleural diseases. Chapters in the clinical section are written in an accessible and uniform style, making extensive use of illustrative material and covering definition, incidence and epidemiology, etiology and pathogenesis, clinical presentation, investigations, treatments, possible complications and directions for future development. State-of-the-art scientific knowledge is presented at an appropriate level for the practicing clinician, and published management guidelines are included where relevant. Each chapter concludes with a summary of its key points, highlighting practical messages regarding patient management for the reader. *Textbook of Pleural Diseases* is an indispensable reference for pulmonary physicians and trainees worldwide.
