

# Chapter 1

## Anatomy

### Learning objectives

To learn the anatomy of the eye, orbit and the third, fourth and sixth cranial nerves, to permit an understanding of medical conditions affecting these structures.

### Introduction

A knowledge of ocular anatomy and function is important to the understanding of eye diseases. A brief outline is given below.

### Gross anatomy

The eye (Fig. 1.1) comprises:

- A tough outer coat which is transparent anteriorly (the *cornea*) and opaque posteriorly (the *sclera*). The junction between the two is called the *limbus*. The extra-ocular muscles attach to the outer sclera while the optic nerve leaves the globe posteriorly.
- A rich vascular coat (the *uvea*) forms the *choroid* posteriorly, which is lined by and firmly attached to the retina. The choroid nourishes the outer two-thirds of the retina. Anteriorly, the uvea forms the ciliary body and the iris.
- The *ciliary body* contains the smooth *ciliary muscle*, whose contraction allows lens shape to alter and the focus of the eye to be changed. The ciliary epithelium secretes *aqueous humour* and maintains the ocular pressure. The ciliary body provides attachment for the *iris*, which forms the pupillary diaphragm.
