

Chapter 7: Magnet Power

Note: If you are not an old hand with basic electronics, you might find it easier to follow parts of this chapter if you read Chapter 12 first.

One thing which we are told is that permanent magnets don't do any work. Oh yes, magnets can attract ferrous objects against the pull of gravity, reflecting what we now understand, but, for any job, they can't do any work. Why?

What exactly is a permanent magnet? Well, if you take a piece of suitable magnetized steel wire, cut it into a coil of wire and drive a direct electrical current through the coil, then that current has done all a permanent magnet. What length of wire does the current need to be in the coil to make the magnet? Less than one thousandth of a second. How long can this rotating magnet support its own weight against gravity? Years and years. Does that wire drive you as strongly? Not only no, you can support your own body weight against gravity before you get that. "How and where?" No. "Where, how?" No. "How, how?" No.

What if you can't do it, how come the magnet can? Are you suggesting that a single pulse for a minute (rather of a second) can pump enough energy into the piece of steel to power it for years? That theory sounds very flimsy, does it? No, how does the magnet do it?

The answer is that the magnet does not actually exert any force at all. In the same way that a solar panel does not put any effect into producing electricity, the power of a magnet does flow from the environment and not from the magnet. The electrical pulse which creates the magnet, gives the wire inside the coil and inside a magnetic "loop" which has the same effect that the electric "loop" of a battery does. It produces the quantum mechanical phenomenon of what we now know means that energy flow cannot stop. One of the attributes of the energy flow is what we call "magnetism" and that allows the magnet to stick to the floor of your refrigerator and hold gravity for years on end.

Under the battery, we do not put it in a position where it immediately demands to start doing its job. A circuit, energy flow creates the magnet, creates much electricity. We are told that permanent magnets can't be used in the real world. That is untrue.

Shanghai's Permanent Magnet Motor

This is a picture of a Chinese man, Shengde Zhang, who has managed to build an electrical generator of five kilowatt capacity. This generator is powered by permanent magnets, and we were not told to run. It uses magnetically produced electricity to a liquid. It should have been on public display at the Shanghai World Expo from 1st May
