Hamilton, 2017-06-21 Environmental biochemistry is a part of environmental chemistry which is the study of the various chemical and biochemical processes occurring in nature It includes subfields like soil chemistry atmospheric chemistry and also aquatic chemistry This book attempts to understand the multiple branches that fall under the discipline of environmental biochemistry and how such concepts have practical applications It is compiled in such a manner that it will provide in depth knowledge about the theory and practice of the subject For someone with an interest and eye for detail this text covers the most significant topics in the field of environmental biochemistry This textbook is meant for students who are looking for an elaborate reference text on this area

Environmental Biochemistry James Fisher, 2019-08-23 Applying principles of Biochemistry for the protection of environment is the main concern of environmental biochemistry The main themes include managing water quality and air resources protection from radiation to maintain industrial hygiene etc Environmental biochemists employ living organism and their capabilities for such purposes The pace of change in environmental biochemistry has continued unabated since 1980 This text discusses the nature of these recent changes and developments without compromising its principal subject matter While compiling this book a serious view has been kept in mind that environmental biochemistry is essentially different from biochemistry Wherever necessary diagrams and structures of compounds have been used Biochemistry is a multidiscipline field that studies the chemistry of life processes These processes can be loosely divided into the following groups reactions that are anabolic build up molecules or catabolic break down molecules chemistry of regulatory pathways hormones and genes and the chemistry of cell structure At the cellular level the reactions include oxidation reduction reactions group transfer hydrolysis bond making and breaking reactions On the systemic level the reaction represent pathways and processes in living system that are important in the energy transfer biological information flow protein structures oxygen flow and catalysis of reactions These predefined reactions processes pathways and systems all function together enabling the living system to function normally This book attempts to understand the multiple branches that fall under the discipline of environmental biochemistry and how such concepts have practical applications It is compiled in such a manner that it will provide in depth knowledge about the theory and practice of the subject

Ecological Biochemistry Gerd-Joachim Krauss, Dietrich H. Nies, 2014-08-29 The first stand alone textbook for at least ten years on this increasingly hot topic in times of global climate change and sustainability in ecosystems Ecological biochemistry refers to the interaction of organisms with their abiotic environment and other organisms by chemical means Biotic and abiotic factors determine the biochemical flexibility of organisms which otherwise easily adapt to environmental changes by altering their metabolism Sessile plants in particular have evolved intricate biochemical response mechanisms to

fit into a changing environment This book covers the chemistry behind these interactions bottom up from the atomic to the system s level An introductory part explains the physico chemical basis and biochemical roots of living cells leading to secondary metabolites as crucial bridges between organisms and the respective ecosystem The focus then shifts to the biochemical interactions of plants fungi and bacteria within terrestrial and aquatic ecosystems with the aim of linking biochemical insights to ecological research also in human influenced habitats A section is devoted to methodology which allows network based analyses of molecular processes underlying systems phenomena A companion website offering an extended version of the introductory chapter on Basic Biochemical Roots is available at <http://www.wiley.com/go/KraussNies>

Ecological Biochemistry *Principles of Environmental Biochemistry* Erik Hamilton, 2025-08-25 Environmental biochemistry is a subdiscipline of environmental chemistry that focuses on the chemical and biochemical processes occurring in the natural environments It encompasses several specialized fields including soil chemistry atmospheric chemistry and aquatic chemistry This book is a compilation of chapters that discuss the most vital concepts in the field of environmental biochemistry Some of the diverse topics covered in here address the varied branches that fall under this category This book with its detailed analysis and data will prove immensely beneficial to professionals and students involved in this area at various levels
