### Abstract

Intonation patterns play a significant role in successful direct communication i.e. speaking in the target language. Some language learners generalize their native language patterns while speaking target language, in other words they make some pronunciation errors. In the present study, firstly, intonation patterns of English and Persian have been analyzed and discussed contrastively. Secondly, an error analysis study of intonation patterns on Iranian undergraduate EFL students carried out. In order to collect data the voices of thirty Iranian undergraduate EFL students while reading aloud an authentic English text have been recorded. Then their errors while using English intonation patterns have been identified. The results confirmed the predictions and showed that the subjects erred in using rise-fall pattern in the sentences containing two clauses more than other patterns. Whereas they did not err while applying rise intonation.

### INTRODUCTION

Language learning is actually a process of trial and error, in which a learner forms a hypothesis and later on proves it, reject it or modify it (Huang, 2002). There is an Italian proverb "Sbagliando si impara" (We can learn through our error), so making mistakes can indeed be regarded as an essential part of learning. (Norris, 1983). Brown (1987) says that language learning, like any other human learning is a process that involves the making mistakes. Students' errors are thus treated as a surface phenomenon and sometimes the learners' own system to approximate the real system of the real target language (Chiang, 1981). This level of target language where the learners are in, as James (1998) classifies in his book, is called "interlanguage". Interlanguage is the language that the second/foreign language learners use while using the target language. If the process of language learning considered as a continuum, there are two languages as the poles: first/mother language and second/target language. The place of the learner in this continuum is called interlanguage.

*The languages of Malta* Albert Gatt, 2018 The purpose of this volume is to present a snapshot of the state of the art of research on the languages of the Maltese islands which include spoken Maltese Maltese English and Maltese Sign Language Malta is a tiny but densely populated country with over 422 000 inhabitants spread over only 316 square kilometers It is a bilingual country with Maltese and English enjoying the status of official languages Maltese is a descendant of Arabic but due to the history of the island it has borrowed extensively from Sicilian Italian and English Furthermore local dialects still coexist alongside the official standard language The status of English as a second language dates back to British colonial rule and just as in other former British colonies a characteristic Maltese variety of English has developed To these languages must be added Maltese Sign Language which is the language of the Maltese Deaf community This was recently recognised as Malta's third official language by an act of Parliament in 2016 While a volume such as the present one can hardly do justice to all aspects of a diverse and complex linguistic situation even in a small community like that of Malta our aim in editing this book was to shed light on the main strands of research being undertaken in the Maltese linguistic context Six of the contributions in this book focus on Maltese and explore a broad range of topics including historical changes in the Maltese sound system syllabification strategies the interaction of prosody and gesture the constraints regulating t insertion the productivity of derivational suffixes and raising phenomena The study of Maltese English especially with the purpose of establishing the defining characteristics of this variety of English is a relatively new area of research Three of the papers in this volume deal with Maltese English which is explored from the different perspectives of rhythm the syntax of nominal phrases and lexical choice The last contribution discusses the way in which Maltese Sign Language LSM has evolved alongside developments in LSM research In summary we believe the present volume has the potential to present a unique snapshot of a complex linguistic situation in a geographically restricted area Given the nature and range of topics proposed the volume will likely be of interest to researchers in both theoretical and comparative linguistics as well as those working with experimental and corpus based methodologies Our hope is that the studies presented here will also serve to pave the way for further research on the languages of Malta encouraging researchers to also take new directions including the exploration of variation and sociolinguistic factors which while often raised as explanatory constructs in the papers presented here remain under researched
