

HOW DOES BLOCKCHAIN WORK?

One party requests a transaction.

Requested transactions are funneled into a P2P network and broadcast to each individual computer (or node).

Individual nodes receive the request and validate the transaction using an algorithm.

Once the block is added to an existing chain, transactions are complete and permanent.

Approved transactions are represented as blocks and added to a public ledger.

of the same coin which reinforces the book's focus on small state paradoxes and raises the question of whether smallness can be considered the defining characteristic of governance in these countries. This book will have a broad appeal because of the different world regions it analyses. It will be of interest to postgraduate students, scholars and researchers of international relations, security, sustainability, governance, development and political economy, as well as Small State Studies.
