F2- Future Fuel Chandan Kumar Bhatt,2023-11-10 In present word of industrialization with so many industries and millions of automobiles running on ic engines with their ever increasing numbers all running on petroleum based products are facing a major threat of extinction of these petroleum reservoirs Internal Combustion Engine ICE or IC Engine An internal combustion engine sometimes referred to as an ICE or IC engine is a kind of heat engine in which fuel is burnt with the aid of an oxidant usually air in a combustion chamber that is an essential part of the working fluid flow circuit The expansion of the hot high pressure gases produced during combustion acts directly on a part of an internal combustion engine In most cases the force is received by a rotor Wankel engine gas turbine blades piston engine nozzles jet engine or pistons piston engine This force transforms chemical energy into kinetic energy which drives moves or powers whatever the engine is attached to It moves the component over a distance to do this Therefore there is need of some alternative fuel which can replace petroleum based fuels in an effective manner and that fuel should also be available in abundance and can be used in existing type of ic engines without much modification work On exploring our possibilities for an alternative fuel for ic engines we can easily vote for Hydrogen Gas Based Engines These types of engines are highly efficient in nature and do not require much modification work One biggest limitation of Hydrogen Gas Based Engine is low volumetric efficiency but we can overcome this with the use of oxygen enriched air and also with pure moist oxygen This step will also help in reducing emission related problems associated with such type of engines
