

WEATHERING OF ROCKS AND SOIL

Weathering is a collection of natural processes that, over time, break large rock into smaller and smaller pieces. Rocks can be decomposed, that is, broken down, by physical processes (called mechanical weathering) and chemical processes (called chemical weathering). When a piece of rock of any size moves during weathering, the process is then called erosion. When the force of gravity pulling material downhill causes erosion, it is called mass wasting.

Mechanical Weathering

Mechanical weathering is the physical decomposition of rocks. There are a number of physical processes that break rock down into smaller and smaller pieces.
