Centralised Databases

A **single** database located at **1 site** on a network

- Manage, update and backup Data

Disadvantages:

- Bottlenecking from multiple users accessing the same file – slowing down productivity

Distributed Databases

Consists of **2 or more files** located at different sites on a network

Advantages:

Having **multiple database files** means:

- Users won't interfere with each other when accessing / manipulating Data
- Speed since files are retrieved from nearest location
- If one site fails, the system can still run

Disadvantages:

- Time for Synchronisation of the multiple databases
- Data Replication for each different database file
