

**CHAPTER 10 REVIEW***States of Matter***SECTION 1****SHORT ANSWER** Answer the following questions in the space provided.

1. Identify whether the descriptions below describe an ideal gas or a real gas.

\_\_\_\_\_ **ideal gas**

a. The gas will not condense because the molecules do not attract each other.

\_\_\_\_\_ **ideal gas**

b. Collisions between molecules are perfectly elastic.

\_\_\_\_\_ **real gas**

c. Gas particles passing close to one another exert an attraction on each other.

2. The formula for kinetic energy is
- $KE = \frac{1}{2}mv^2$
- .

a. As long as temperature is constant, what happens to the kinetic energy of the colliding particles during an elastic collision?

**The energy is transferred between them.**

b. If two gases have the same temperature and share the same energy but have different molecular masses, which molecules will have the greater speed?

**Those with the lower molecule mass.**

3. Use the kinetic-molecular theory to explain each of the following phenomena:

a. A strong-smelling gas released from a container in the middle of a room is soon detected in all areas of that room.

**Gas molecules are in constant, rapid, random motion.**

b. As a gas is heated, its rate of effusion through a small hole increases if all other factors remain constant.

**As a gas is heated, each molecule's speed increases; therefore, the molecules pass through the small hole more frequently.**

4. a. \_\_\_\_\_
- b, d, c, a**

List the following gases in order of rate of effusion, from lowest to highest. (Assume all gases are at the same temperature and pressure.)

(a) He

(b) Xe

(c) HCl

(d) Cl<sub>2</sub>

## Chapter 10 States Of Matter Test:

**Extreme States of Matter in Strong Interaction Physics** Helmut Satz, 2012-03-15 The thermodynamics of strongly interacting matter has become a profound and challenging area of modern physics both in theory and in experiment. Statistical quantum chromodynamics through analytical as well as numerical studies provides the main theoretical tool while in experiment high energy nuclear collisions are the key for extensive laboratory investigations. The field therefore straddles statistical particle and nuclear physics both conceptually and in the methods of investigation used. This course tested primer addresses above all the many young scientists starting their scientific research in this field providing them with a general self contained introduction that emphasizes in particular the basic concepts and ideas with the aim of explaining why we do what we do. To achieve this goal the present text concentrates mainly on equilibrium thermodynamics first the fundamental ideas of strong interaction thermodynamics are introduced and then the main concepts and methods used in the study of the physics of complex systems are summarized. Subsequently simplified phenomenological pictures leading to critical behavior in hadronic matter and to hadron quark phase transitions are introduced followed by elements of finite temperature lattice QCD leading to the important results obtained in computer simulation studies of the lattice approach. Next the relation of the resulting critical behavior to symmetry breaking restoration in QCD is clarified before the text turns to the study of the QCD phase diagram. The presentation of bulk equilibrium thermodynamics is completed by studying the properties of the quark gluon plasma as new state of strongly interacting matter. The final chapters of the book are devoted to more specific topics which arise when nuclear collisions are considered as a tool for the experimental study of QCD thermodynamics.
