Practical Statistics for Data Scientists Peter Bruce, Andrew Bruce, Peter Gedeck, 2020-04-10 Statistical methods are a key part of data science yet few data scientists have formal statistical training Courses and books on basic statistics rarely cover the topic from a data science perspective The second edition of this popular guide adds comprehensive examples in Python provides practical guidance on applying statistical methods to data science tells you how to avoid their misuse and gives you advice on what s important and what s not Many data science resources incorporate statistical methods but lack a deeper statistical perspective If you re familiar with the R or Python programming languages and have some exposure to statistics this quick reference bridges the gap in an accessible readable format With this book you ll learn Why exploratory data analysis is a key preliminary step in data science How random sampling can reduce bias and yield a higher quality dataset even with big data How the principles of experimental design yield definitive answers to questions How to use regression to estimate outcomes and detect anomalies Key classification techniques for predicting which categories a record belongs to Statistical machine learning methods that learn from data Unsupervised learning methods for extracting meaning from unlabeled data *The Oxford Handbook of Quantitative Methods in Psychology, Vol. 1* Todd D. Works of John W. Tukey: Philosophy and principles of data analysis, 1949-1964 John Wilder Tukey,1984 **Method Matters in Psychology** Brian D. Haig,2018-09-25 This book applies a range of ideas about scientific discovery found in contemporary philosophy of science to psychology and related behavioral sciences In doing so it aims to advance our understanding of a host of important methodological ideas as they apply to those sciences A philosophy of local scientific realism is adopted in favor of traditional accounts that are thought to apply to all sciences As part of this philosophy the implications of a commitment to philosophical naturalism are spelt out and a correspondence theory of truth is defended by showing how it helps explain various features of scientific practice The central chapter of the book presents a broad theory of scientific method that comprises the detection of empirical phenomena and their subsequent understanding by constructing explanatory theories through the use of abductive methods This theory of scientific method is then used as a framework to reconstruct the well known qualitative method of grounded theory and to present a systematic perspective on clinical reasoning and case formulation Relatedly an abductive or explanationist understanding of methods is employed to evaluate the knowledge credentials of evolutionary psychology In addition the conceptual and methodological foundations of a variety of quantitative methods are examined Exploratory factor analysis and tests of statistical significance are given special attention

Exploratory Data Analysis John MacInnes, 2020 Exploratory data analysis EDA pioneered by J W Tukey in the 1960s emphasises that data analysis itself is a science distinct from the confirmation or rejection of hypotheses by a statistical test EDA stresses the importance of understanding the data generating process that produces the data to be analysed how that might structure the data in various ways or give rise to errors within it Such exploration of the data is fundamental to the generation of hypotheses about it or models to summarise it as opposed to the later confirmation or rejection of these hypotheses or models Visualisation is central to EDA both for the initial inspection of data and for the presentation of the results of analysis Robust or resistant measures of level and spread such as the median or the interquartile range are preferred over mathematically more tractable but sensitive measures such as the arithmetic mean or standard deviation EDA is often compared to detective work in the discovery of the author of some crime as opposed to the proceedings of the trial that decides upon guilt or innocence
