Advances in Computation and Intelligence Zhenhua Li, 2009-09-30 Volumes CCIS 51 and LNCS 5812 constitute the proceedings of the Fourth International Symposium on Intelligence Computation and Applications ISICA 2009 held in Huangshi China during October 23-25 ISICA 2009 attracted over 300 submissions Through rigorous reviews 58 papers were included in LNCS 5821 and 54 papers were collected in CCIS 51 ISICA conferences are one of the first series of international conferences on computational intelligence that combine elements of learning adaptation evolution and fuzzy logic to create programs as alternative solutions to artificial intelligence

Multivariate Geostatistics Hans Wackernagel, 2013-03-09 An introduction to geostatistics stressing the multivariate aspects for scientists engineers and statisticians The book presents a brief review of statistical concepts a detailed introduction to linear geostatistics and an account of three basic methods of multivariate analysis Applications from very different areas of science as well as exercises with solutions are provided to help convey the general ideas In this second edition the chapters regarding normal kriging and cokriging have been restructured and the section on non stationary geostatistics has been entirely rewritten

Applied Spatial Data Analysis with R Roger S. Bivand, Edzer J. Pebesma, Virgilio Gómez-Rubio, 2008-08-24 We began writing this book in parallel with developing software for handling and analysing spatial data with R R Development Core Team 2008 though the book is now complete software development will continue in the R community fashion of rich and satisfying interaction with users around the world of rapid releases to resolve problems and of the usual joys and frustrations of getting things done There is little doubt that without pressure from users the development of R would not have reached its present scale and the same applies to analysing spatial data analysis with R It would however not be sufficient to describe the development of the R project mainly in terms of narrowly defined utility In addition to being a community project concerned with the development of world class data analysis software implementations it promotes specific choices with regard to how data analysis is carried out R is open source not only because open source software development including the dynamics of broad and inclusive user and developer communities is arguably an attractive and successful development model

Archaeological Spatial Analysis Mark Gillings, Piraye Hacıgüzeller, Gary Lock, 2020-01-16 Effective spatial analysis is an essential element of archaeological research this book is a unique guide to choosing the appropriate technique applying it correctly and understanding its implications both theoretically and practically Focusing upon the key techniques used in archaeological spatial analysis this book provides the authoritative yet accessible methodological guide to the subject which has thus far been missing from the corpus Each chapter tackles a specific technique or application area and follows a clear

and coherent structure First is a richly referenced introduction to the particular technique followed by a detailed description of the methodology then an archaeological case study to illustrate the application of the technique and conclusions that point to the implications and potential of the technique within archaeology The book is designed to function as the main textbook for archaeological spatial analysis courses at undergraduate and post graduate level while its user friendly structure makes it also suitable for self learning by archaeology students as well as researchers and professionals

Remote Sensing Image Analysis: Including the Spatial Domain Steven M. de Jong, Freek D. van der Meer, 2007-07-26 Remote Sensing image analysis is mostly done using only spectral information on a pixel by pixel basis Information captured in neighbouring cells or information about patterns surrounding the pixel of interest often provides useful supplementary information This book presents a wide range of innovative and advanced image processing methods for including spatial information captured by neighbouring pixels in remotely sensed images to improve image interpretation or image classification Presented methods include different types of variogram analysis various methods for texture quantification smart kernel operators pattern recognition techniques image segmentation methods sub pixel methods wavelets and advanced spectral mixture analysis techniques Apart from explaining the working methods in detail a wide range of applications is presented covering land cover and land use mapping environmental applications such as heavy metal pollution urban mapping and geological applications to detect hydrocarbon seeps The book is meant for professionals PhD students and graduates who use remote sensing image analysis image interpretation and image classification in their work related to disciplines such as geography geology botany ecology forestry cartography soil science engineering and urban and regional planning
