Data Structures and Algorithms in Java Michael T. Goodrich, Roberto Tamassia, 2004 The third edition of this conceptually elegant and pedagogically innovative text continues to incorporate the object oriented design paradigm using Java as the implementation language while also providing intuition and analysis of fundamental data structures and algorithms All of this is done in a clear friendly writing style that uses visuals to introduce and simplify important analytic and mathematical concepts Entirely new chapter on recursion Additional exercises on the analysis of simple algorithms New case study on parenthesis matching and HTML validation

Spatial Modeling in Natural Sciences and Engineering Jürgen Friedrich, 2011-06-27 The author introduces the reader to the creation and implementation of space related models by applying a learning by doing and problem oriented approach The required procedural skills are rarely taught at universities and many scientists and engineers struggle to transfer a model into a computer program The purpose of this book is to fill this gap It moves from simple to more complex applications covering various important topics in the sequence dynamic matrix processing 2D and 3D graphics databases Java applets and parallel computing A file SMOP zip with all examples can be downloaded free of charge from the Internet at <http://de.geocities.com/bsttc2/book>
