You will also find a chapter dedicated to Solidity that will give you the necessary means to understand and even build your own smart contracts. Other important topics covered include building backend servers that act as indexing layers and managing storage efficiently with solutions like the interplanetary file system or IPFS. Last but not least, you will find chapters that examine the biggest problems on Ethereum today: onboarding and scalability. These include the state of the art of the available strategies to tackle them, such as meta-transactions, smart accounts, ENS, state channels, sidechains, and more.

**What You'll Learn**

- Connect to the blockchain from the browser and send transactions from client side.
- Build a web app that provides a read-only interface to a blockchain contract.
- Create a wallet interface for arbitrary fungible tokens, displaying the user's balance and allowing for simple transfers to other addresses.
- Develop a web app that stores large blobs of data off-chain and keeps a reference to it on-chain, e.g., avatars, long text descriptions.
- Produce a web app that relies on a centralized server for indexing on-chain information to be presented to the user.
