Handbook of Research on Predictive Modeling and Optimization Methods in Science and Engineering Kim, Dookie, Sekhar Roy, Sanjiban, Länsivaara, Tim, Deo, Ravinesh, Samui, Pijush, 2018-06-15 The disciplines of science and engineering rely heavily on the forecasting of prospective constraints for concepts that have not yet been proven to exist especially in areas such as artificial intelligence Obtaining quality solutions to the problems presented becomes increasingly difficult due to the number of steps required to sift through the possible solutions and the ability to solve such problems relies on the recognition of patterns and the categorization of data into specific sets Predictive modeling and optimization methods allow unknown events to be categorized based on statistics and classifiers input by researchers The Handbook of Research on Predictive Modeling and Optimization Methods in Science and Engineering is a critical reference source that provides comprehensive information on the use of optimization techniques and predictive models to solve real life engineering and science problems Through discussions on techniques such as robust design optimization water level prediction and the prediction of human actions this publication identifies solutions to developing problems and new solutions for existing problems making this publication a valuable resource for engineers researchers graduate students and other professionals

Regression Analysis Fifth Edition continues to present both the conventional and less common uses of linear regression in today's cutting edge scientific research. The authors blend both theory and application to equip readers with an understanding of the basic principles needed to apply regression model building techniques in various fields of study including engineering management and the health sciences. Following a general introduction to regression modeling including typical applications, a host of technical tools are outlined such as basic inference procedures, introductory aspects of model adequacy checking and polynomial regression models and their variations. The book then discusses how transformations and weighted least squares can be used to resolve problems of model inadequacy and also how to deal with influential observations. The Fifth Edition features numerous newly added topics including a chapter on regression analysis of time series data that presents the Durbin-Watson test and other techniques for detecting autocorrelation as well as parameter estimation in time series regression models. Regression models with random effects in addition to a discussion on subsampling and the importance of the mixed model. Tests on individual regression coefficients and subsets of coefficients. Examples of current uses of simple linear regression models and the use of multiple regression models for understanding patient satisfaction data. In addition to Minitab, SAS and S-PLUS, the authors have incorporated JMP and the freely available R software to illustrate the discussed techniques and procedures in this new edition. Numerous exercises have been added throughout allowing readers to test their understanding of the material.

Introduction to Linear Regression Analysis Fifth Edition is an excellent book for statistics and engineering courses on regression at the upper undergraduate and graduate levels. The book also serves as a valuable resource for professionals in the fields of engineering, life and biological sciences and the social sciences.

Ashraf M. Rahim, Gregg L. Fiegel, 2011. Performance data for these sections were obtained from the Caltrans Pavement Condition Report (PCR) and were analyzed along with inventory data obtained from as-built sheets. In Phase II, seventeen (17) CS-O sections (eight (8) on the Central Coast and nine (9) in Northern California) were identified and examined. Performance data were extracted from the Caltrans PCR. As-built and maintenance history data were obtained from the Caltrans District 05 (D05) and District 02 (D02) offices. Data for these sections were combined with data from the Central Valley region (Phase I) to evaluate the performance of CS-O sections throughout California. Also, performance models were developed for three different regions: namely Central Valley (CV), Central Coast (CC) and Northern California (NCA).
