K Nearest Neighbor Algorithm Fouad Sabry,2023-06-23 What Is K Nearest Neighbor Algorithm The k nearest neighbors technique also known as k NN is a non parametric supervised learning method that was initially created in 1951 by Evelyn Fix and Joseph Hodges in the field of statistics Thomas Cover later expanded on the original concept It has applications in both regression and classification In both scenarios the input is made up of the k training instances in a data collection that are the closest to one another Whether or not k NN was used for classification or regression the results are as follows The output of a k nearest neighbor classification is a class membership A plurality of an item s neighbors votes on how the object should be classified and the object is then assigned to the class that is most popular among its k nearest neighbors where k is a positive number that is often quite small If k is equal to one then the object is simply classified as belonging to the category of its single closest neighbor The result of a k NN regression is the value of a certain property associated with an object This value is the average of the values of the k neighbors that are the closest to the current location If k is equal to one then the value of the output is simply taken from the value of the one nearest neighbor How You Will Benefit I Insights and validations about the following topics Chapter 1 K nearest neighbors algorithm Chapter 2 Supervised learning Chapter 3 Pattern recognition Chapter 4 Curse of dimensionality Chapter 5 Nearest neighbor search Chapter 6 Cluster analysis Chapter 7 Kernel method Chapter 8 Large margin nearest neighbor Chapter 9 Structured kNN Chapter 10 Weak supervision II Answering the public top questions about k nearest neighbor algorithm III Real world examples for the usage of k nearest neighbor algorithm in many fields IV 17 appendices to explain briefly 266 emerging technologies in each industry to have 360 degree full understanding of k nearest neighbor algorithm technologies Who This Book Is For Professionals undergraduate and graduate students enthusiasts hobbyists and those who want to go beyond basic knowledge or information for any kind of k nearest neighbor algorithm *Advanced Hybrid Information Processing* Shuai Liu,Gelan Yang,2019-05-12 This book constitutes the refereed proceedings of the Second EAI International Conference on Advanced Hybrid Information Processing ADHIP 2018 held in Yiyang China in October 2018 The 71 papers presented were selected from 228 submissions and focus on hybrid big data processing Since information processing has acted as an important research domain in science and technology today it is the right time to develop deeper and wider use of hybrid information processing especially information processing for big data There are more remaining issues waiting for solving such as classification and systemization of big data objective tracking and behavior understanding in big multimedia data encoding and compression of big data **Advances in Computational Science and Computing** Ning Xiong,Zheng Xiao,Zhao Tong, Jiayi Du,Lipo Wang,Maozhen Li,2018-11-14 This book includes papers on the recent advances in state of the art computational science and computing presented at the 2018 International Symposium on Computational Science and Computing IS CSC 2018 held in Huangshan China from 28 to 29 July 2018 All the papers were rigorously peer reviewed by
