*Performance Guarantees in Communication Networks* Cheng-Shang Chang, 2012-12-06 Providing performance guarantees is one of the most important issues for future telecommunication networks This book describes theoretical developments in performance guarantees for telecommunication networks from the last decade Written for the benefit of graduate students and scientists interested in telecommunications network performance this book consists of two parts The first introduces the recently developed filtering theory for providing deterministic hard guarantees such as bounded delay and queue length The filtering theory is developed under the min plus algebra where one replaces the usual addition with the min operator and the usual multiplication with the addition operator As in the classical linear system theory the filtering theory treats an arrival process or a departure process as a signal and a network element as a system Network elements including traffic regulators and servers can be modelled as linear filters under the min plus algebra and they can be joined by concatenation filter bank summation and feedback to form a composite network element The problem of providing deterministic guarantees is equivalent to finding the impulse response of composite network elements This section contains material on s r calculus Filtering theory for deterministic traffic regulation service guarantees and networks with variable length packets Traffic specification Networks with multiple

inputs and outputs Constrained traffic regulation The second part of the book addresses stochastic soft guarantees focusing mainly on tail distributions of queue lengths and packet loss probabilities and contains material on  $s$   $q$   $r$   $q$  calculus and  $q$  envelope rates The large deviation principle The theory of effective bandwidth The mathematical theory for stochastic guarantees is the theory of effective bandwidth Based on the large deviation principle the theory of effective bandwidth provides approximations for the bandwidths required to meet stochastic guarantees for both short range dependent inputs and long range dependent inputs

**Introduction to Probability Theory and Stochastic Processes** John Chiasson, 2013-04-08 A unique approach to stochastic processes that connects the mathematical formulation of random processes to their use in applications This book presents an innovative approach to teaching probability theory and stochastic processes based on the binary expansion of the unit interval Departing from standard pedagogy it uses the binary expansion of the unit interval to explicitly construct an infinite sequence of independent random variables of any given distribution on a single probability space This construction then provides the framework to understand the mathematical formulation of probability theory for its use in applications Features include The theory is presented first for countable sample spaces Chapters 1-3 and then for uncountable sample spaces Chapters 4-18 Coverage of the explicit construction of i i d random variables on a single probability space to explain why it is the distribution function rather than the functional form of random variables that matters when it comes to modeling random phenomena Explicit construction of continuous random variables to facilitate the digestion of random variables i e how they are used in contrast to how they are defined Explicit construction of continuous random variables to facilitate the two views of expectation as integration over the underlying probability space abstract view or as integration using the density function usual view A discussion of the connections between Bernoulli geometric and Poisson processes Incorporation of the Johnson Nyquist noise model and an explanation of why and when it is valid to use a delta function to model its autocovariance Comprehensive astute and practical *Introduction to Probability Theory and Stochastic Processes* is a clear presentation of essential topics for those studying communications control machine learning digital signal processing computer networks pattern recognition image processing and coding theory
