Principles Of Fiber Optic Communication:

Optical Fiber Communications Principles and Practice Edwin Conway,2019-11-05 The field of fibre optics communications has exploded over the past two decades Fibre is an integral part of modern day communication infrastructure and can be found along roads in buildings hospitals and machinery Fibre optic communication has revolutionised the telecommunications industry It has also made its presence widely felt within the data networking community as well Using fibre optic cable optical communications have enabled telecommunications links to be made over much greater distances and with much lower levels of loss in the transmission medium and possibly most important of all fiber optical communications has enabled much higher data rates to be accommodated Optical fibers can be used to transmit light and thus information over long distances Fiber based systems have largely replaced radio transmitter systems for long haul optical data transmission They are widely used for telephony but also for Internet traffic long high speed local area networks LANs cable TV CATV and increasingly also for shorter distances within buildings In most cases silica fibers are used except for very short distances where plastic optical fibers can be advantageous The basic components are light signal transmitter the optical fiber and the photo detecting receiver The additional elements such as fiber and cable splicers and connectors regenerators beam splitters and optical amplifiers are employed to improve the performance of the communication system The book offers a completely up to date accessible and in depth introduction to the principles and applications of optical fiber communications It describes the recent developments in optical fiber communication materials devices components and systems

Fiber Optic Communications Shiva Kumar,M. Jamal Deen,2014-05-12 Fiber optic communication systems have advanced dramatically over the last four decades since the era of copper cables resulting in low cost and high bandwidth transmission Fiber optics is now the backbone of the internet and long distance telecommunication Without it we would not enjoy the benefits of high speed internet or low rate international telephone calls This book introduces the basic concepts of fiber optic communication in a pedagogical way The important mathematical results are derived by first principles rather than citing research articles In addition physical interpretations and real world analogies are provided to help students grasp the fundamental concepts Key Features Lucid explanation of key topics such as fibers lasers and photodetectors Includes recent developments such as coherent communication and digital signal processing Comprehensive treatment of fiber nonlinear transmission Worked examples exercises and answers Accompanying website with PowerPoint slides and numerical experiments in MATLAB Intended primarily for senior undergraduates and graduates studying fiber optic communications the book is also suitable as a professional resource for researchers working in the field of fiber optic communications

Optical Fiber Communications T. L. Singal,2017-01-16 Beginning with an overview of historical development the electromagnetic spectrum and optical power basics this book offers an in depth discussion of optic receivers optical transmitters and amplifiers The text discusses attenuation transmission losses optical sources such as

semiconductor light emitting diodes and lasers providing several dispersion management schemes that restore the amplified signal to its original state Topics are discussed in a structured manner with definitions explanations examples illustrations and informative facts Extensive pedagogical features such as numerical problems review questions multiple choice questions and student focussed learning objectives are also provided Mathematical derivations and geometrical representations are included where necessary This text will be useful for undergraduate and graduate students of electronics communication engineering and optical fiber communications
