Filtering the Web to Feed Data Warehouses Witold Abramowicz, Pawel J. Kalczyński, Krzysztof Węcel, 2002-07-24. Information is a key factor in business today and data warehousing has become a major activity in the development and management of information systems to support the proper flow of information. Unfortunately, the majority of information systems are based on structured information stored in organizational databases, which means that the company is isolated from the business environment by concentrating on their internal data sources only. It is therefore vital that organizations take advantage of external business information which can be retrieved from Internet services and mechanically organized within the existing information structures. Such a continuously extending integrated collection of documents and data could facilitate decision-making processes in the organization. *Filtering the Web to Feed Data Warehouses* discusses areas such as how to use data warehouse for filtering Web content, how to retrieve relevant information from diverse sources on the Web, how to handle the time aspect, how to mechanically establish links among data warehouse structures and documents filtered from external sources, how to use collected information to increase corporate knowledge, and gives a comprehensive example illustrating the idea of supplying data warehouses with relevant information filtered from the Web.

Building a Data Warehouse Vincent Rainardi, 2008-03-11. *Building a Data Warehouse With Examples in SQL Server* describes how to build a data warehouse completely from scratch and shows practical examples on how to do it. Author Vincent Rainardi also describes some practical issues he has experienced that developers are likely to encounter in their first data warehousing project, along with solutions and advice. The relational database management system (RDBMS) used in the examples is SQL Server; the version will not be an issue as long as the user has SQL Server 2005 or later. The book is organized as follows: In the beginning of this book, chapters 1 through 6, you learn how to build a data warehouse, for example, defining the architecture, understanding the methodology, gathering the requirements, designing the data models, and creating the databases. Then, in chapters 7 through 10, you learn how to populate the data warehouse, for example, extracting from source systems, loading the data stores, maintaining data quality, and utilizing the metadata. After you populate the data warehouse, in chapters 11 through 15, you explore how to present data to users using reports and multidimensional databases, and how to use the data in the data warehouse for business intelligence, customer relationship management, and other purposes. Chapters 16 and 17 wrap up the book. After you have built your data warehouse, before it can be released to production, you need to test it thoroughly. After

your application is in production you need to understand how to administer data warehouse operation **Data Warehousing in Action** Sean Kelly,1997-08-04 Construct and implement a data warehousing plan In their efforts to collect information that will give them an edge many companies have amassed vast amounts of data Often this data becomes unwieldy and difficult to translate into anything useful Data warehousing storing all of this data in a system that allows for rapid retrieval of customized information is the solution This book written by a data warehousing authority is a step by step guide to creating and managing a data warehouse from start to finish reviewing marketing technology and design issues

Swift,2001 Preface Corporations that achieve high customer retention and high customer profitability aim for The right product or service to the right customer at the right price at the right time through the right channel to satisfy the customer s need or desire Information Technology in the form of sophisticated databases fed by electronic commerce point of sale devices ATMs and other customer touch points is changing the roles of marketing and managing customers Information and knowledge bases abound and are being leveraged to drive new profitability and

manage changing relationships with customers The creation of knowledge bases sometimes called data warehouses or Info Structures provides profitable opportunities for business managers to define and analyze their customers behavior to develop and better manage short and long term relationships Relationship Technology will become the new norm for the use of information and customer knowledge bases to forge more meaningful relationships This will be accomplished through advanced technology processes centered on the customers and channels as well as methodologies and software combined to affect the behaviors of organizations internally and their customers channels externally We are quickly moving from Information Technology to Relationship Technology The positive effect will be astounding and highly profitable for those that also foster CRM At the turn of the century merchants and bankers knew their customers they lived in the same neighborhoods and understood the individual shopping and banking needs of each of their customers They practiced the purest form of Customer Relationship Management CRM With mass merchandising and franchising customer relationships became distant As the new millennium begins companies are beginning to leverage IT to return to the CRM principles of the neighborhood store and bank The customer should be the primary focus for most organizations Yet customer information in a form suitable for marketing or management purposes either is not available or becomes available long after a market opportunity passes therefore CRM opportunities are lost Understanding customers today is accomplished by maintaining and acting on historical and very detailed data obtained from numerous computing and point of contact devices The data is merged enriched and transformed into meaningful information in a specialized database In a world of powerful computers personal software applications and easy to use analytical end user software tools managers have the power to segment and directly address marketing opportunities through well managed processes and marketing strategies This book is written for business executives and managers interested in gaining advantage by using advanced customer information and marketing process techniques Managers charged with managing and enhancing relationships with their customers will find this book a profitable guide for many years Many of today s managers are also charged with cutting the cost of sales to increase profitability All managers need to identify and focus on those customers who are the most profitable while possibly withdrawing from supporting customers who are unprofitable The goal of this book is to help you identify actions to categorize and address your customers much more effectively through the use of information and technology define the benefits of knowing customers more intimately and show how you can use information to increase turnover revenues satisfaction and profitability The level of detailed information that companies can build about a single customer now enables them to market through knowledge based relationships By defining processes and providing activities this book will accelerate your CRM learning curve and provide an effective framework that will enable your organization to tap into the best practices and experiences of CRM driven companies in Chapter 14 In Chapter 6 you will have the opportunity to learn how to in less than 100 days start or advance your customer database or data warehouse environment This book also

provides a wider managerial perspective on the implications of obtaining better information about the whole business. The customer-centric knowledge-based info structure changes the way that companies do business and it is likely to alter the structure of the organization, the way it is staffed and even how its management and employees behave. Organizational changes affect the way the marketing department works and the way that it is perceived within the organization. Effective communications with prospects, customers, alliance partners, competitors, the media and through individualized feedback mechanisms creates a whole new image for marketing and new opportunities for marketing successes. Chapter 14 provides examples of companies that have transformed their marketing principles into CRM practices and are engaging more and more customers in long-term satisfaction and higher per customer profitability. In the title of this book and throughout its pages I have used the phrase Relationship Technologies to describe the increasingly sophisticated data warehousing and business intelligence technologies that are helping companies create lasting customer relationships, therefore improving business performance. I want to acknowledge that this phrase was created and protected by NCR Corporation and I use this trademark throughout this book with the company's permission. Special thanks and credit for developing the Relationship Technologies concept goes to Dr. Stephen Emmott of NCR's acclaimed Knowledge Lab in London. As time marches on, there is an ever-increasing velocity with which we communicate, interact, position and involve ourselves and our customers in relationships. To increase your Return on Investment (ROI), the right information and relationship technologies are critical for effective Customer Relationship Management. It is now possible to know who your customers are and who your best customers are, stimulate what they buy or know what they won't buy, time when and how they buy, learn customers' preferences and make them loyal customers, define characteristics that make up a great, profitable customer model, channels are best to address a customer's needs, predict what they may or will buy in the future, keep your best customers for many years. This book features many companies using CRM, decision support, marketing databases and data warehousing techniques to achieve a positive ROI using customer-centric knowledge bases. Success begins with understanding the scope and processes involved in true CRM and then initiating appropriate actions to create and move forward into the future. Walking the talk differentiates the perennial ongoing winners. Reinvestment in success generates growth and opportunity. Success is in our ability to learn from the past, adopt new ideas and actions in the present and to challenge the future. Respectfully, Ronald S. Swift, Dallas, Texas, June 2000.
