answer the question Why do volcanoes erupt He takes us through the ideas of the ancient Greeks who proposed that volcanoes resulted from the venting of subterranean winds and the internal combustion theories of Roman times and notes how thinking about volcanoes took a backward symbolic turn with the rise of Christian conceptions of Hell a direction that would not be reversed until the Renaissance He chronicles the 18th century conflict between the Neptunists who believed that volcanic rocks originated from oceanic accretions and the Plutonists who argued for the existence of a molten planetary core and traces how volcanology moved from divine science and armchair geology to empirical field study with the rise of 19th century naturalism Finally Sigurdsson describes how 19th and 20th century research in thermodynamics petrology geochemistry and plate tectonics contribute to the current understanding of volcanic activity Drawing liberally from classical sources and firsthand accounts this chronicle is not only a colorful history of volcanology but an engrossing chapter in the development of scientific thought
