**Topics in Number Theory** J.S. Chahal, 2013-11-11 This book reproduces with minor changes the notes prepared for a course given at Brigham Young University during the academic year 1984-1985. It is intended to be an introduction to the theory of numbers. The audience consisted largely of undergraduate students with no more background than high school mathematics. The presentation was thus kept as elementary and self-contained as possible. However, because the discussion was generally carried far enough to introduce the audience to some areas of current research, the book should also be useful to graduate students. The only prerequisite to reading the book is an interest in and aptitude for mathematics. Though the topics may seem unrelated, the study of diophantine equations has been our main goal. I am indebted to several mathematicians whose published as well as unpublished work has been freely used throughout this book. In particular, the Phillips Lectures at Haverford College given by Professor John T. Tate have been an important source of material for the book. Some parts of Chapter 5 on algebraic curves are for example based on these lectures.

**Combinatorics, Graph Theory and Computing** Frederick Hoffman, Sarah Holliday, Zvi Rosen, Farhad Shahrokhi, John Wierman, 2024-06-15 This proceedings volume convenes selected revised papers presented at the 52nd Southeastern International Conference on Combinatorics, Graph Theory and Computing (SEICCGTC 2021) virtually held at Florida Atlantic University in Boca Raton, USA on March 8-12, 2021. As has been a tradition since its inception in 1970, this edition once more brought together mathematicians, practitioners, and scientists around novel findings in combinatorics, graph theory, and computing and their interactions. The lectures and works presented at the Conference have proven to be of great interest to other scientists and analysts employing these mathematical sciences in their professional activities in business, industry, and government. Such an environment promotes a better understanding of the roles of modern applied mathematics, combinatorics, and computer science. Many works have demonstrated that disciplines have increasingly contributed to each other. With this series of Conferences, the gaps between the fields tend to decrease even further. This volume is of particular interest for the community of pure and applied mathematicians in academia, industry, and government working in combinatorics and graph theory as well as related areas of computer science and the interactions among these fields. Its findings can also benefit a general audience of practitioners and students from related fields.

**Handbook of Algebra**, 1995-12-18 Handbook of Algebra defines algebra as consisting of many different ideas, concepts, and results. Even the nonspecialist is likely to encounter most of these either somewhere in the literature, disguised as a definition or a theorem, or to hear about them and feel the need for more information. Each chapter of the book combines

some of the features of both a graduate level textbook and a research level survey This book is divided into eight sections Section 1A focuses on linear algebra and discusses such concepts as matrix functions and equations and random matrices Section 1B cover linear dependence and discusses matroids Section 1D focuses on fields Galois Theory and algebraic number theory Section 1F tackles generalizations of fields and related objects Section 2A focuses on category theory including the topos theory and categorical structures Section 2B discusses homological algebra cohomology and cohomological methods in algebra Section 3A focuses on commutative rings and algebras Finally Section 3B focuses on associative rings and algebras This book will be of interest to mathematicians logicians and computer scientists

**Canadian Journal of Mathematics**, 1981-04

**Computational and Algorithmic Problems in Finite Fields** Igor Shparlinski, 2012-12-06 This volume presents an exhaustive treatment of computation and algorithms for finite fields Topics covered include polynomial factorization finding irreducible and primitive polynomials distribution of these primitive polynomials and of primitive points on elliptic curves constructing bases of various types and new applications of finite fields to other areas of mathematics For completeness also included are two special chapters on some recent advances and applications of the theory of congruences optimal coefficients congruential pseudo random number generators modular arithmetic etc and computational number theory primality testing factoring integers computing in algebraic number theory etc The problems considered here have many applications in computer science coding theory cryptography number theory and discrete mathematics The level of discussion presuppose only a knowledge of the basic facts on finite fields and the book can be recommended as supplementary graduate text For researchers and students interested in computational and algorithmic problems in finite fields

Hayes, 1991 This volume develops all the tools needed to provide modern adelic proofs of the polynomial analogs to two of the most famous theorems of classical additive number theory Vinogradov's 3 Primes Theorem and the Waring Problem

**LATIN '92** Imre Simon, 1992-03-11 This volume contains the proceedings of LATIN 92 a theoretical computer science symposium Latin American Theoretical Informatics held in São Paulo Brazil in April 1992 LATIN is intended to be a comprehensive symposium in the theory of computing but for this first meeting the following areas were chosen for preferential coverage algorithms and data structures automata and formal languages computability and complexity theory computational geometry cryptography parallel and distributed computation symbolic and algebraic computation and combinatorial and algebraic aspects of computer science The volume includes full versions of the invited papers by 11 distinguished guest lecturers as well as 32 contributed papers selected from 66 submissions from authors with affiliations in 26 countries

*Combinatorics, Graph Theory and Computing* Sarah Heuss, Richard Low, John C. Wierman, 2024-11-26 This proceedings volume compiles selected revised papers presented at the 53rd South Eastern International Conference on Combinatorics Graph Theory and Computing SEICCGTC 2022 which took place at Florida Atlantic University in Boca Raton USA from March 7th to 11th 2022 The

SEICCGTC is widely regarded as a trendsetter for other conferences worldwide. Many ideas and themes initially discussed here have subsequently been explored in other conferences and symposia. Since 1970 the conference has been held annually in Baton Rouge, Louisiana and Boca Raton, Florida. Over the years it has grown to become the primary annual conference in its fields, playing a crucial role in disseminating results and fostering collaborative work. This volume is tailored for the community of pure and applied mathematicians in academia, industry, and government who work in combinatorics and graph theory as well as related areas of computer science and the intersections among these fields.
