

COMPUTATIONAL LEARNING THEORY

Learning Theory

- Theorems that characterize classes of learning problems or specific algorithms in terms of computational complexity or *sample complexity*, i.e. the number of training examples necessary or sufficient to learn hypotheses of a given accuracy.
- Complexity of a learning problem depends on:
 - Size or expressiveness of the hypothesis space.
 - Accuracy to which target concept must be approximated.
 - Probability with which the learner must produce a successful hypothesis.
 - Manner in which training examples are presented, e.g. randomly or by query to an oracle.

Types of Results

- **Learning in the limit:** Is the learner guaranteed to converge to the correct hypothesis in the limit as the

Machine Learning in Translation Peng Wang, David B. Sawyer, 2023-04-12 Machine Learning in Translation introduces machine learning ML theories and technologies that are most relevant to translation processes approaching the topic from a human perspective and emphasizing that ML and ML driven technologies are tools for humans Providing an exploration of the common ground between human and machine learning and of the nature of translation that leverages this new dimension this book helps linguists translators and localizers better find their added value in a ML driven translation environment Part One explores how humans and machines approach the problem of translation in their own particular ways in terms of word embeddings chunking of larger meaning units and prediction in translation based upon the broader context Part Two introduces key tasks

including machine translation translation quality assessment and quality estimation and other Natural Language Processing NLP tasks in translation Part Three focuses on the role of data in both human and machine learning processes It proposes that a translator s unique value lies in the capability to create manage and leverage language data in different ML tasks in the translation process It outlines new knowledge and skills that need to be incorporated into traditional translation education in the machine learning era The book concludes with a discussion of human centered machine learning in translation stressing the need to empower translators with ML knowledge through communication with ML users developers and programmers and with opportunities for continuous learning This accessible guide is designed for current and future users of ML technologies in localization workflows including students on courses in translation and localization language technology and related areas It supports the professional development of translation practitioners so that they can fully utilize ML technologies and design their own human centered ML driven translation workflows and NLP tasks

Machine Learning Kevin P. Murphy, 2012-08-24 A comprehensive introduction to machine learning that uses probabilistic models and inference as a unifying approach Today s Web enabled deluge of electronic data calls for automated methods of data analysis Machine learning provides these developing methods that can automatically detect patterns in data and then use the uncovered patterns to predict future data This textbook offers a comprehensive and self contained introduction to the field of machine learning based on a unified probabilistic approach The coverage combines breadth and depth offering necessary background material on such topics as probability optimization and linear algebra as well as discussion of recent developments in the field including conditional random fields L1 regularization and deep learning The book is written in an informal accessible style complete with pseudo code for the most important algorithms All topics are copiously illustrated with color images and worked examples drawn from such application domains as biology text processing computer vision and robotics Rather than providing a cookbook of different heuristic methods the book stresses a principled model based approach often using the language of graphical models to specify models in a concise and intuitive way Almost all the models described have been implemented in a MATLAB software package PMTK probabilistic modeling toolkit that is freely available online The book is suitable for upper level undergraduates with an introductory level college math background and beginning graduate students
