This document describes the development process for OpenWrt. It covers the various components of the system, the build process, and the packaging process. It is intended for developers who are interested in contributing to the project.

## OpenWrt Development Model (Simplified)

OpenWrt development is based on a collection of modules, each with its own set of dependencies. The development process is divided into three main stages: development, testing, and release. The development stage involves creating and testing new packages. The testing stage involves verifying that the packages work correctly on various hardware configurations. The release stage involves packaging the system and distributing it to users.
