**Efficient High Performance Processors** Jawad Haj-Yahya, Avi Mendelson, Yosi Ben Asher, Anupam Chattopadhyay, 2018-03-22 This book explores energy efficiency techniques for high performance computing HPC systems using power management methods Adopting a step by step approach it describes power management flows algorithms and mechanism that are employed in modern processors such as Intel Sandy Bridge Haswell Skylake and other architectures e g ARM Further it includes practical examples and recent studies demonstrating how modern processors dynamically manage wide power ranges from a few milliwatts in the lowest idle power state to tens of watts in turbo state Moreover the book

explains how thermal and power deliveries are managed in the context this huge power range The book also discusses the different metrics for energy efficiency presents several methods and applications of the power and energy estimation and shows how by using innovative power estimation methods and new algorithms modern processors are able to optimize metrics such as power energy and performance Different power estimation tools are presented including tools that break down the power consumption of modern processors at sub processor core thread granularity The book also investigates software firmware and hardware coordination methods of reducing power consumption for example a compiler assisted power management method to overcome power excursions Lastly it examines firmware algorithms for dynamic cache resizing and dynamic voltage and frequency scaling DVFS for memory sub systems
