Empirical Studies in Software Engineering Christian Bunse, Andreas Jedlitschka, 2003 Many academics and practitioners believe that evaluation has a vital role to play in software engineering As well as evaluating both application level and component level products software engineers need to be concerned with the evaluation of development processes engineering methods and supplier organizations However both academics and practitioners are concerned about the cost and effectiveness of applying many of the existing assessment methods One of the aims of the workshop was to address the question of justifying the use of empirical assessment and evaluation in software engineering as well as to hear about practical experiences Both this theme together with the other issues involved in evaluation were addresses through technical presentations and experience reports Thus the worlshop was a unique forum dedicated to the presentation and discussion of research and practical experiences addressing all aspects of empirical assessment and evaluation in software engineering
