M. H. Hamza,1999 Proceedings of the European Computing Conference Nikos Mastorakis,Valeri Mladenov,Vassiliki T. Kontargyri,2010-03-25 Software testing has been considered so important that organizations can assign teams only for testing activities Testing is an important activity to ensure software quality Tests are usually run several times to certify that code maintenance did not accidentally insert defects into working parts of the software In such situations test teams shall be able to estimate the required effort to execute test cases in its schedules and to request more resources or negotiate deadlines when necessary When regarding model based testing approaches that we use in our documented Integrated and Optimized Software Testing methodology IOSTP 1 4 a high number of test cases can be automatically generated As team resources are limited it may be not practical to execute all generated test cases Their complexity usually determines the effort required to execute them and it can be used for planning test resources and test suites Several software development estimation models have been proposed over the years However these models do not estimate the effort for executing a given test suite since their estimations are based on software development complexity instead of its test planning test case design and test execution complexity According to our reading of the literature e g 5 14 best practices in model based effort estimation include Local calibration or LC i e using local data to set two special tuning parameters Stratification i e given a database of past projects and a current project to be estimated restrict local calibration to just those records from similar projects **Pentaho Kettle Solutions** Matt Casters,Roland Bouman,Jos van Dongen,2010-09-28 A complete guide to Pentaho Kettle the Pentaho Data Integration toolset for ETL This practical book is a complete guide to installing configuring and managing Pentaho Kettle If you're a database administrator or developer you'll first get up to speed on Kettle basics and how to apply Kettle to create ETL solutions before progressing to specialized concepts such as clustering extensibility and data vault models Learn how to design and build every phase of an ETL solution Shows developers and database administrators how to use the open source Pentaho Kettle for enterprise level ETL processes Extracting Transforming and Loading data Assumes no prior knowledge of Kettle or ETL and brings beginners thoroughly up to speed at their own pace Explains how to get Kettle solutions up and running then follows the 34 ETL subsystems model as created by the Kimball Group to explore the entire ETL lifecycle including all aspects of data warehousing with Kettle Goes beyond routine tasks to explore how to extend Kettle and scale Kettle solutions using a distributed cloud Get the most out of Pentaho Kettle and your data warehousing with this detailed guide from simple single table data migration to complex multisystem clustered data integration tasks Handbook of Database Security Michael Gertz,Sushil Jajodia,2007-12-03 Handbook of Database Security Applications and Trends provides an up to date overview of data security models techniques and architectures in a variety of data management applications and settings In addition to providing an overview of data security in different application settings this book includes an outline for future research directions within the field The book is designed for

Security in Computing Systems Joachim Biskup, 2008-11-14 This monograph on Security in Computing Systems Challenges Approaches and Solutions aims at introducing surveying and assessing the fundamentals of security with respect to computing Here computing refers to all activities which individuals or groups directly or indirectly perform by means of computing systems i.e. by means of computers and networks of them built on telecommunication We all are such individuals whether enthusiastic or just bowed to the inevitable So as part of the information society we are challenged to maintain our values to pursue our goals and to enforce our interests by consciously designing a global information infrastructure on a large scale as well as by appropriately configuring our personal computers on a small scale As a result we hope to achieve secure computing Roughly speaking computer assisted activities of individuals and computer mediated cooperation between individuals should happen as required by each party involved and nothing else which might be harmful to any party should occur The notion of security circumscribes many aspects ranging from human qualities to technical enforcement First of all in considering the explicit security requirements of users administrators and other persons concerned we hope that usually all persons will follow the stated rules but we also have to face the possibility that some persons might deviate from the wanted behavior whether accidentally or maliciously
