Schum, Dawn A. Trevisani, 2007 Proceedings of SPIE present the original research papers presented at SPIE conferences and other high quality conferences in the broad ranging fields of optics and photonics These books provide prompt access to the latest innovations in research and technology in their respective fields Proceedings of SPIE are among the most cited references in patent literature **Modelling, Simulation and Optimization** Gregorio Romero, Luisa Martinez, 2010-02-01 Computer Aided Design and system analysis aim to find mathematical models that allow emulating the behaviour of components and facilities The high competitiveness in industry the little time available for product development and the high cost in terms of time and money of producing the initial prototypes means that the computer aided design and analysis of products are taking on major importance On the other hand in most areas of engineering the components of a system are interconnected and belong to different domains of physics mechanics electrics hydraulics thermal When developing a complete multidisciplinary

system it needs to integrate a design procedure to ensure that it will be successfully achieved Engineering systems require an analysis of their dynamic behaviour evolution over time or path of their different variables The purpose of modelling and simulating dynamic systems is to generate a set of algebraic and differential equations or a mathematical model In order to perform rapid product optimisation iterations the models must be formulated and evaluated in the most efficient way Automated environments contribute to this One of the pioneers of simulation technology in medicine defines simulation as a technique not a technology that replaces real experiences with guided experiences reproducing important aspects of the real world in a fully interactive fashion iii In the following chapters the reader will be introduced to the world of simulation in topics of current interest such as medicine military purposes and their use in industry for diverse applications that range from the use of networks to combining thermal chemical or electrical aspects among others We hope that after reading the different sections of this book we will have succeeded in bringing across what the scientific community is doing in the field of simulation and that it will be to your interest and liking Lastly we would like to thank all the authors for their excellent contributions in the different areas of simulation
