

Bunch length pre-compression

motivation:

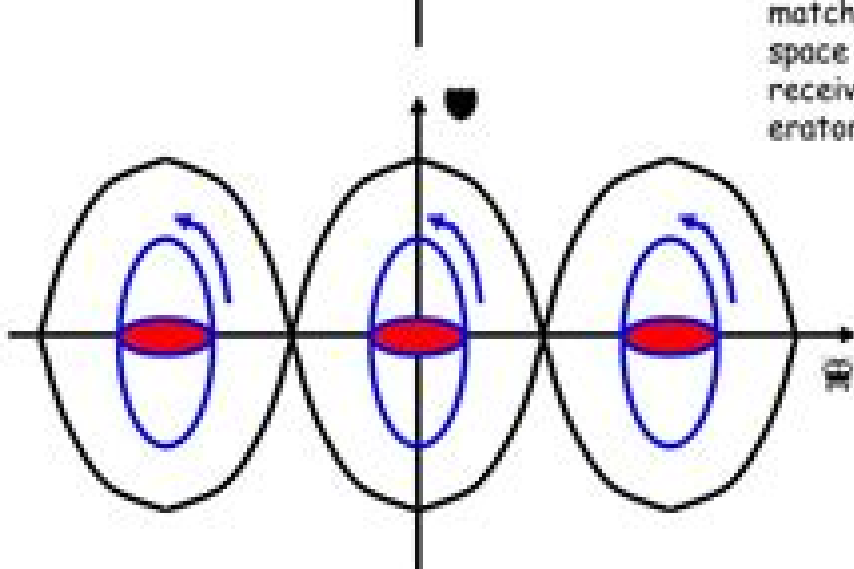

- produce short bunches (at "expense" of increased energy spread)
- for longitudinal matching from one accelerator to a downstream accelerator
- for reducing beam loss in downstream transfer line with high dispersion
- for longitudinal phase space matching (energy spread to bucket in receiving accelerator)

concept: induce longitudinal quadrupole-mode oscillation by variation of rf voltage amplitude

International Conference on High-Energy Accelerators Wolfgang Simon Newman,1980 The Conference timetable had to be
 so arranged as to spread the main topics over several separate sessions It was therefore decided to publish the material in
 these Proceedings under nine subject headings irrespective of session Within each chapter which is preceded by a list of the
 sessions featuring the subject all papers invited and contributed whether presented at the Conference or accepted for
 publication only have been arranged in some logical order The reports of the four Panel Discussions were edited or
 summarized by the respective Moderator in consultation with Panel Members In one instance shortened versions of the
 Introductory Papers precede the discussion Where possible verbatim accounts of the often lively exchanges have been
 retained The customary catalogue of high energy accelerators has been published separately The continuing world wide
 activities in accelerator research with its ever larger projects are reflected by the numerous contributions accepted for
 inclusion in these Proceedings which have reached the limit of what a single volume can manageably contain while making
 rapid publication even harder to achieve All the more reason to extend the gratitude of all concerned to those involved in the

 secretaries who followed the guidelines for the presentation of camera ready copy
