

INTRODUCTION TO COASTAL NAVIGATION

“And after this sort he proceedeth from place to place until he arrive unto his desired porte, which is a conclusion infallible if there be no other impediments (whereof there hath been good consideration had) which may breed error, for from such negligence may arise many inconveniences.”

What is coastal navigation? In simple terms, marine navigation is “getting your vessel from where you are to where you want to go, safely and efficiently.” More formally, it is the “process of directing the movement of a vessel from one point to another.” It is derived from the two Latin words, *navis* (ship), and *agere* (to move). *Coastal navigation* refers to navigation in coastal (sometimes termed pilot) waters, where the opportunity exists to determine or check the vessel's position by reference to navigational aids and observations (by either visual or electronic means) of the coast and its features. On a long ocean passage, for example, it may suffice to determine the vessel's position only once or twice a day, and to within a margin of uncertainty of several square miles. A well-found oceangoing vessel may afford the navigator a dry workstation, and numerous electronic aids, such as the *Global Positioning System* (GPS) receiver and radar. A passing vessel would be a curiosity in seldom traveled waters, rather than an object for collision-avoidance maneuvers. In coastal waters, particularly in narrow channels, position fixes might be required every 5 to 15 minutes, and required accuracy limits could well be measured in yards. The navigator's workspace could be
