Advanced Technologies for Gas Turbines National Academies of Sciences, Engineering, and Medicine, Division on Engineering and Physical Sciences, Aeronautics and Space Engineering Board, Committee on Advanced Technologies for Gas Turbines, 2020-03-19 Leadership in gas turbine technologies is of continuing importance as the value of gas turbine production is projected to grow substantially by 2030 and beyond Power generation aviation and the oil and gas industries rely on advanced technologies for gas turbines Market trends including world demographics energy security and resilience decarbonization and customer profiles are rapidly changing and influencing the future of these industries and gas turbine technologies Technology trends that define the technological environment in which gas turbine research and development will take place are also changing including inexpensive large scale computational capabilities highly autonomous systems additive manufacturing and cybersecurity It is important to evaluate how these changes influence the gas turbine industry and how to manage these changes moving forward *Advanced Technologies for Gas Turbines* identifies high priority opportunities for improving and creating advanced technologies that can be introduced into the design and manufacture of gas turbines to enhance their performance The goals of this report are to assess the 2030 gas turbine global landscape via analysis of global leadership market trends and technology trends that impact gas turbine applications develop a prioritization process define high priority research goals identify high priority research areas and topics to achieve the specified goals and direct future research Findings and recommendations from this report are important in guiding research within the gas turbine industry and advancing electrical power generation commercial and military aviation and oil and gas production *Advanced Technologies for Planning and Operation of Prosumer Energy Systems, Volume II* Bin Zhou, Junjie Hu, Liansong Xiong, Jian Zhao, Siqu Bu, Jingyang Fang, Hugo Morais, Peng Hou, 2023-10-18 **Advanced Technologies for Sustainable Systems** Yehia Bahei-El-Din, Maguid Hassan, 2016-10-21 This book reports on cutting edge technologies that have been fostering sustainable development in a variety of fields including built and natural environments structures energy advanced mechanical technologies as well as electronics and communication technologies It reports on the applications of Geographic Information Systems GIS Internet of Things predictive maintenance as well as modeling and control techniques to reduce the environmental impacts of buildings enhance their environmental contribution and positively impact the social equity The different chapters selected on the basis of their timeliness and relevance for an audience of engineers and professionals describe the major trends in the field of sustainable engineering research providing them with a snapshot of current issues together with important technical information for their daily work as well as an interesting source of new ideas for their future research The works included in this book were selected among the contributions to the BUE ACE1 the first event held in Cairo Egypt on 8 9 November 2016 of a series of Annual Conferences Exhibitions ACE organized by the British University in Egypt BUE **Advanced Technologies, Systems, and Applications IX** Naida Ademović, Zlatan

Akšamija, Almir Karabegović, 2024-09-30 This book is a comprehensive compilation of articles that delve into the forefront of interdisciplinary applications of innovative technologies. It presents the scientific inquiries and outcomes showcased at the 15th Days of the Bosnian Herzegovinian American Academy of Arts and Sciences conference held in Sarajevo, Bosnia and Herzegovina, from June 20 to 23, 2024. The collection highlights the latest advancements and will draw the interest of researchers in diverse domains of engineering, including civil engineering, data science, and geographic information systems, computer science, and artificial intelligence, advanced environmental engineering, and project management, information and communication technologies, and advanced electrical power systems. This book serves as a testament to the ongoing pursuit of knowledge and innovation in these fields, offering insights into the current research landscape and future directions. The contributions not only expand the theoretical foundations but also explore practical applications that address contemporary challenges in technology and engineering. The editors gratefully acknowledge the dedicated efforts of all the symposia chairs of the 15th Days of BHAAAS, whose meticulous planning and scholarly oversight have enriched this book and contributed to its scholarly significance.

13th International Conference on Information Systems and Advanced Technologies "ICISAT 2023" Mohamed Ridda Laouar, Valentina Emilia Balas, Vincenzo Piuri, Dana Rad, Zineb Touati Hamad, Abbas Cheddad, 2024-08-27 This book covers the Proceedings of the 13th International Conference on Information Systems and Advanced Technologies (ICISAT 2023). One of the evocative and valuable dimensions of this conference is the way it brings together researchers, scientists, academics, and engineers in the field from different countries and enables discussions and debate of relevant issues, challenges, opportunities, and research findings. The ICISAT 2023 conference provided a forum for research and developments in the field of information systems and advanced technologies and new trends in developing information systems, organizational aspects of their development, and intelligent aspects of the final product. The aim of the ICISAT 2023 is to report progress and development of methodologies, technologies, planning, and implementation tools and standards in information systems, technologies, and sciences. ICISAT 2023 aims at addressing issues related to the intelligent information data science and decision support system from multidisciplinary perspectives and to discuss the research, teaching, and professional practice in the field. The book of ICISAT 2023 includes selected papers from the 13th International Conference on Information Systems and Advanced Technologies (ICISAT 2023) organized during December 29-30, 2023. In this book, researchers, professional software, and systems engineers from around the world addressed intelligent information data science and decision support system for the conference. The ideas and practical solutions described in the book are the outcome of dedicated research by academics and practitioners aiming to advance theory and practice in this research domain. The list of topics is in all the areas of modern intelligent information systems and technologies, such as neural networks, evolutionary computing, adaptive systems, pervasive system, ubiquitous system, E-learning, and teaching, knowledge-based paradigms, learning paradigms, intelligent data analysis, intelligent decision making, and support system, intelligent network.

Artificial Intelligence and Machine Learning for Industry 4.0 M. Thirunavukkarasan, S. A. Sahaaya Arul Mary, Sathiyaraj R., G. S. Pradeep Ghantasala, Mudassir Khan, 2025-06-10 This book is essential for any leader seeking to understand how to leverage intelligent automation and predictive maintenance to drive innovation enhance productivity and minimize downtime in their manufacturing processes Intelligent automation is widely considered to have the greatest potential for Industry 4.0 innovations for corporations Industrial machinery is increasingly being upgraded to intelligent machines that can perceive act evolve and interact in an industrial environment The innovative technologies featured in this machinery include the Internet of Things cyber physical systems and artificial intelligence Artificial intelligence enables computer systems to learn from experience adapt to new input data and perform intelligent tasks The significance of AI is not found in its computational models but in how humans can use them Consistently observing equipment to keep it from malfunctioning is the procedure of predictive maintenance Predictive maintenance includes a periodic maintenance schedule and anticipates equipment failure rather than responding to equipment problems Currently the industry is struggling to adopt a viable and trustworthy predictive maintenance plan for machinery The goal of predictive maintenance is to reduce the amount of unanticipated downtime that a machine experiences due to a failure in a highly automated manufacturing line In recent years manufacturing across the globe has increasingly embraced the Industry 4.0

concept Greater solutions than those offered by conventional maintenance are promised by machine learning revealing precisely how AI and machine learning based models are growing more prevalent in numerous industries for intelligent performance and greater productivity This book emphasizes technological developments that could have great influence on an industrial revolution and introduces the fundamental technologies responsible for directing the development of innovative firms Decision making requires a vast intake of data and customization in the manufacturing process which managers and machines both deal with on a regular basis One of the biggest issues in this field is the capacity to foresee when maintenance of assets is necessary Leaders in the sector will have to make careful decisions about how when and where to employ these technologies Artificial Intelligence and Machine Learning for Industry 4 0 offers contemporary technological advancements in AI and machine learning from an Industry 4 0 perspective looking at their prospects obstacles and potential applications
