**Cybersecurity and Homeland Security** Lin V. Choi, 2005 Cybersecurity refers to three things measures to protect information technology the information it contains processes and transmits and associated physical and virtual elements which together comprise cyberspace the degree of protection resulting from application of those measures and the associated field of professional endeavor Virtually any element of cyberspace can be at risk and the degree of interconnection of those elements can make it difficult to determine the extent of the cybersecurity framework that is needed Identifying the major weaknesses in U S cybersecurity is an area of some controversy the defense against attacks on computer systems and associated infrastructure has appeared to be generally fragmented and varying widely in effectiveness

**Federal Facility Cybersecurity** United States. Government Accountability Office, 2014

**Cybersecurity** United States Government

Accountability Office, 2018-05-14 CYBERSECURITY Threats Impacting the Nation **Cybersecurity** Edward C. Liu, Gina Stevens, Kathleen Ann Ruane, Alissa M. Dolan, Richard M. Thompson, II, 2012-07-09 The federal government's role in protecting U.S. citizens and critical infrastructure from cyberattacks has been the subject of recent congressional interest. Critical infrastructure commonly refers to those entities that are so vital that their incapacitation or destruction would have a debilitating impact on national security, economic security, or the public health and safety. This report discusses selected legal issues that frequently arise in the context of recent legislation to address vulnerabilities of critical infrastructure to cyber threats, efforts to protect government networks from cyber threats, and proposals to facilitate and encourage sharing of cyber threat information among private sector and government entities. This report also discusses the degree to which federal law may preempt state law. It has been argued that in order to ensure the continuity of critical infrastructure and the larger economy, a regulatory framework for selected critical infrastructure should be created to require a minimum level of security from cyber threats. On the other hand, others have argued that such regulatory schemes would not improve cybersecurity while increasing the costs to businesses, expose businesses to additional liability if they fail to meet the imposed cybersecurity standards, and increase the risk that proprietary or confidential business information may be inappropriately disclosed. In order to protect federal information networks, the Department of Homeland Security (DHS) in conjunction with the National Security Agency (NSA) uses a network intrusion system that monitors all federal agency networks for potential attacks. Known as EINSTEIN, this system raises significant privacy implications, a concern acknowledged by DHS interest groups, academia, and the general public. DHS has developed a set of procedures to address these concerns, such as minimization of information collection, training, and accountability requirements, and retention rules. Notwithstanding these steps, there are concerns that the program may implicate privacy interests protected under the Fourth Amendment. Although many have argued that there is a need for federal and state governments and owners and operators of the nation's critical infrastructures to share information on cyber vulnerabilities and threats, obstacles to information sharing may exist in current laws protecting electronic communications or in antitrust law. Private entities that share information may also be concerned that sharing or receiving such information may lead to increased civil liability or that shared information may contain proprietary or confidential business information that may be used by competitors or government regulators for unauthorized purposes. Several bills in the 112th Congress would seek to improve the nation's cybersecurity and may raise some or all of the legal issues mentioned above. For example, H.R. 3523 (Rogers-Mich Ruppertsberger) addresses information sharing between the intelligence community and the private sector. H.R. 3674 (Lungren) includes provisions regarding the protection of critical infrastructure as well as information sharing. H.R. 4257 (Issa-Cummings) would require all federal agencies to continuously monitor their computer networks for malicious activity and would impose additional cybersecurity requirements on all federal agencies. S. 2102 (Feinstein) seeks to facilitate information sharing. S. 2105 (Lieberman) includes the information sharing

provisions of S 2102 as well as provisions relating to the protection of critical infrastructure and federal government networks S 2151 McCain and H R 4263 Bono Mack also addresses information sharing among the private sector and between the private sector and the government Many of these bills also include provisions specifically addressing the preemption of state laws *Cybersecurity, Actions Needed to Strengthen U.S. Capabilities* United States.
