

## Electric Vehicles

**Context:** ReNew Power is a rapidly growing renewables company in India that has raised record amounts of capital and has scaled its portfolio to become India's largest renewables power company in a relatively short amount of time. ReNew alone generates more than 1% of all of India's electricity needs each year – all from renewables.

Given ReNew's success in the clean electricity generation market, ReNew is now looking to diversify into new business areas. One of the most talked about areas in news media and industry circles is that of Electric Vehicles ("EV"). EVs, if charged using electricity generated from clean energy sources, can be good for the environment; large-scale adoption of EVs will stand to reduce India's oil imports, boost employment across the value chain (battery manufacturing, assembly, etc.), increase demand for electricity at home, and promote investments in more clean energy projects in the country.

Management would like receive a market entry strategy from you to enter the EV market.

**Please answer the following questions in a word format within the specified word limits. You may also upload separate backup files, if required.**

1. Comparison of two sedan cars – one, a convention internal combustion engine model, and the other an Electric Vehicle – in terms of kilometer range, upfront cost to customers, and a payback period model for customers (make reasonable assumptions about fuel efficiency per kilometer, number of kilometers driven a year, fuel prices, and electricity prices) (150 words)
2. Summarize the Government of India's position on Electric Vehicles – cite specific policies and regulations from the last three years, at both the central and state government level, to encourage the use of 2-, 3-, and 4- wheeler EVs and EV trucks in India. (200 words)
3. What are the different parts of the value chain of the Electric Vehicle industry – what parts of this value chain can be indigenized? In other words, what advantages in India can be leveraged to set up a particular part of the value chain here (e.g., tax incentives and lower labor costs for battery assembly) (150 words)
4. Use a business framework of your choice to make a market entry recommendation to ReNew Power to enter the EV industry – in your recommendation, please also provide an assessment of what specific part of the EV value chain should ReNew enter, where ReNew's clean energy generation experience can be leveraged and how, and pitfalls that management should be wary of. (300 words)

### **Electric Vehicles Case Study America 3 2330 Electric Vehicles Case Study:**

Sustainable Mobility Ashwani Kumar, Arbind Prasad, Gaurav Kumar, 2024-11-07 This book is essential for anyone interested in understanding and implementing sustainable transportation practices as it provides comprehensive insights into the challenges, advancements, and policies related to sustainable mobility. Sustainable transportation refers to any means of transportation that is green and has a low impact on the environment. The goal of sustainable transportation is to balance our current and future needs. As per the United Nations Brundtland Commission WCED 1987, sustainable mobility can be defined as mobility that satisfies the needs of present generations without compromising future generations, but in the modern era, we are compromising the needs of the next generation in terms of pollution, depletion of fossil fuels, global warming, poor air quality, and hazardous gases. The three main pillars of sustainability—economics, environment, and social issues—are crushed by modern development, so there is a need to shift from traditional means of transportation to sustainable transportation. Under the vision of sustainable mobility, better infrastructure and services will be provided to support the movement of goods and people. This outcome will be achieved only if four goals are pursued simultaneously: developing the right policy, building awareness, developing intelligent transportation, and creating green vehicles. Sustainable Mobility: Policies, Challenges, and Advancements will discuss transitions from conventional to sustainable mobility, infrastructure development, challenges in this transition period, new vehicle policies, and the latest autonomous vehicles for intelligent transportation. The main highlights of the book are energy-efficient technologies for transportation, accessibility, and safety of the transport system, environmental footprint, health impacts, economic development, and social growth. Sustainable mobility is essential to economic and social development. The environmental impacts of transport can be reduced by reducing the weight of vehicles, creating sustainable styles of driving, reducing the friction of tires, encouraging electric and hybrid vehicles, improving the walking and cycling environment in cities, and enhancing the role of public transport, especially electric vehicles. Going green and sustainable is not only beneficial for the company but it also maximizes the benefits of an environmental focus in the long term.

Variable Renewable Energy and the Electricity Grid Jay Apt, Paulina Jaramillo, 2014-06-13 The integration of renewable energy resources into the electricity grid presents an important challenge. This book provides a review and analysis of the technical and policy options available for managing variable energy resources such as wind and solar power. As well as being of value to government and industry policy makers and planners, the volume also provides a single source for scientists and engineers of the technical knowledge gained during the 4-year RenewElec renewable electricity project at Carnegie Mellon University, the University of Vermont, Vermont Law School, and the Van Ness Feldman environmental law firm. The first part of the book discusses the options for large-scale integration of variable electric power generation, including issues of predictability, variability, and efficiency. The second part presents the scientific findings of the project. In the final part, the authors undertake a critical review of major quantitative regional and national wind integration studies in the United

States Based on comparisons among these studies they suggest areas where improvements in methods are warranted in future studies areas where additional research is needed to facilitate future improvements in wind integration studies and how the research can be put into practice
