Embedded System

- System (embedded system) is a combination of multiple units or components which are assemble together to perform some specific task by following some set of rules.

- System takes some input and gives output by using set of instruction.

- embedded system is a combination of both hardware and software.

- It is a systematic system where if one component fails then it stop to generate output.

e.g. watch, washing machine, microven, mobile, sensors

- It is also known as real time operating system
