Questions 9 Multiple Choice Questions **Designing Embedded Systems** Steve McClure, 2014-04-10 This Handbook reviews the Software Development and Engineering Principles involved in the Design of Embedded Computer Systems The reason behind developing this book can be answered by the following question What does an embedded software engineer produce Now most people would say prototypes and this might seem like the correct answer but it is not The correct answer is that the engineer produces documentation documentation that shows other people how to understand and build the product Now imagine that you are a software engineer who has newly joined the company and you have been given the unenviable task of maintaining an existing product Why was this work given to the new guy The answer is that no one else in the company wanted to tackle this project Why Because there is no documentation So to figure out what the product does and to fix the bugs the new guy or gal has to reverse engineer the source code So the money that management thought they saved when some code was quickly thrown together by a software engineer who has since left the company they now find that several times more is being spent to fix up all the bugs and possibly add on some minor enhancement This type of problem occurs when there is no development procedure Which brings us to the Handbook The Handbook provides a standard procedure which may be used by the Systems Software Embedded Firmware and Hardware departments Various design and development documents are produced at specific points in the project and are passed out for review prior to being used by other team members By having this consistency the entire team now know which design elements will be produced and the need for implementing any reverse engineering will be eliminated Product costs for maintenance will be greatly reduced Manufacturing and Test departments will now have the necessary details with which to complete their work For shouldn't the designers who intuitively understand the product be the ones to write down their knowledge such that it can be passed on to others By presenting these steps in the form of a Handbook which is distributed to the engineering team it then identifies the documents that are to be generated when they should be produced who should create them and who should be involved in the review process This keeps the entire team synchronized fully aware of their responsibilities Now some companies do have such procedures but they are long winded and stored away in some unknown location on a harddrive But a bright green Handbook that clearly spells out the implementation process along with detail gleaned from the author's 30 years of experience in this field of engineering Now wouldn't that be worth having Please refer to The Guidebook version which only provides the project development information Please refer to The Handbook LAMP Project version which includes an additional embedded Linux project to implement a Web based Home Control Security System source code listing provided Use the Author's Link to obtain access to these and other books
