LAST DAYS Do you want to learn how to design and master different Machine Learning algorithms quickly and easily Your  
Customers Will Love This Amazing Guide Today we live in the era of Artificial Intelligence Self driving cars customized  
product recommendations real time pricing speech and facial recognition are just a few examples proving this truth Also  
think about medical diagnostics or automation of mundane and repetitive labor tasks all these highlight the fact that we live  
in interesting times From research topics to projects and applications in different stages of production there is a lot going on  
in the world of Machine Learning Machines and automation represent a huge part of our daily life They are becoming part of  
our experience and existence This is Machine Learning Artificial Intelligence is currently one of the most thriving fields any  
programmer would wish to delve into and for a good reason this is the future Simply put Machine Learning is about teaching  
machines to think and make decisions as we would The difference between the way machines learn and the way we do is that  
while for the most part we learn from experiences machines learn from data Starting from scratch Python Machine Learning  
explains how this happens how machines build their experience and compounding knowledge Data forms the core of Machine  
Learning because within data lie truths whose depths exceed our imagination The computations machines can perform on  
data are incredible beyond anything a human brain could do Once we introduce data to a machine learning model we must  
create an environment where we update the data stream frequently This builds the machine s learning ability The more data  
Machine Learning models are exposed to the easier it is for these models to expand their potential Some of the topics that we  
will discuss inside include What is Machine Learning and how it is applied in real world situations Understanding the  
differences between Machine Learning Deep Learning and Artificial Intelligence Supervised learning unsupervised learning  
and semi supervised learning The place of Regression techniques in Machine Learning including Linear Regression in Python  
Machine learning training models How to use Lists and Modules in Python The 12 essential libraries for Machine Learning in  
Python What is the Tensorflow library Artificial Neural Networks And Much More While most books only focus on widespread  
details without going deeper into the different models and techniques Python Machine Learning explains how to master the  
concepts of Machine Learning technology and helps you to understand how researchers are breaking the boundaries of Data  
Science to mimic human intelligence in machines using various Machine Learning algorithms Even if some concepts of  
Machine Learning algorithms can appear complex to most computer programming beginners this book takes the time to  
explain them in a simple and concise way Would You Like To Know More Buy It NOW And Let Your Customers Get Addicted
