Solidification Processing Merton C. Flemings,1974 Proceedings of the Merton C. Flemings Symposium on Solidification and Materials Processing Merton C. Flemings,2001 This text comprises a collection of papers from the Merton C Flemings Symposium held on the MIT campus in June 2000 The papers cover such topics as dendritic solidification dynamics control of casting quality interdendritic fluid flow semi solid processing and engineering education Rapid Solidification Processing Loren A. Jacobson,1994 *Rapidly Solidification Processing* National Research Council (U.S.). National Materials Advisory Board. Commission on Engineering and Technical Systems,1982 **Eutectic Solidification Processing** Roy Elliott,2013-10-22 Eutectic Solidification Processing Crystalline and Glassy Alloys deals with solidification theory and its application to eutectic processing of crystalline and glassy alloys The underlying theme is an analysis of the different paths taken by the liquid solid transformation as the cooling rate increases and a description of the structure and properties of the solid formed ranging from equilibrium to metastable phase formation in castings to metallic glass formation in splat quenched ribbons This text has seven chapters the first of which describes the main characteristics of the liquid solid transformation The chapters that follow show how control over composition trace impurities heat flow and cooling rate and nucleation and growth gives rise to a wide range of solidification structures Models of the nucleation and growth of eutectic and primary phases are analyzed and used to explain how cast microstructures are formed Aluminum casting alloys and all types of cast iron are discussed along with primary phase formation the dependence of the extent of segregation on solidification conditions and the practice of segregation prevention during solidification This book also describes the importance of fluid flow in producing macroscopic segregation in large ingots and considers ways of minimizing this defect Finally this book gives a brief account of the various types of metallic glasses their fabrication important properties and potential applications This book will be of interest to materials scientists and industrial materials engineers *Rapid Solidification Processing* Robert Mehrabian,Phillip A. Parrish,1988 Solidification Processing of Reinforced Metals R. Asthana,1998-04-06 Much of the success of composites can be attributed to the development of innovative processes Many useful composites are envisaged by materials scientists but the problem of how to make them is often the greater hurdle This process oriented book focuses on the basic principles of composite fabrication Upon studying these processes one is immediately struck by the diversity of ideas and techniques In some cases these have been borrowed from other technologies and were designed for use with quite different materials In other cases some very clever new means have been developed which take account of the characteristics of metals and ceramics and the higher temperatures which are typically involved in their processing Seminar on Solidification Processing Japan Society for Promotion of Science,National Science Foundation, USA.,1983 **Rapid Solidification Processing** ,1978 **Solidification Processing** ,1981 **Solidification Processing under Microgravity** Peter R. Sahm,Manfred H. Keller, *Solidification and Crystallization*

Processing in Metals and Alloys Hasse Fredriksson, Ulla Åkerlind, 2012-08-13 Solidification and Crystallization Processing in Metals and Alloys Hasse Fredriksson KTH Royal Institute of Technology Stockholm Sweden Ulla Åkerlind University of Stockholm Sweden Solidification or crystallization occurs when atoms are transformed from the disordered liquid state to the more ordered solid state and is fundamental to metals processing Conceived as a companion volume to the earlier works *Materials Processing during Casting* 2006 and *Physics of Functional Materials* 2008 this book analyzes solidification and crystallization processes in depth Starting from the thermodynamic point of view it gives a complete description taking into account kinetics and mass transfer down to the final structure Importantly the book shows the relationship between the theory and the experimental results Topics covered include Fundamentals of thermodynamics Properties of interfaces Nucleation Crystal growth in vapours liquids and melts Heat transport during solidification processes Solidification structures faceted dendritic eutectic and peritectic Metallic glasses and amorphous alloy melts Solidification and Crystallization Processing in Metals and Alloys features many solved examples in the text and exercises with answers for students Intended for Masters and PhD students as well as researchers in Materials Science Engineering Chemistry and Metallurgy it is also a valuable resource for engineers in industry
