Advanced Operations Management for Complex Systems Analysis Jingzheng Ren, 2020-04-21 This book focuses on operations management methods for analysing complex systems from a system engineering perspective. It presents various advanced multi-criteria decision analysis methods for investigating factors that influence complex systems. In turn, it shows how to improve systems performance, including their competitiveness, safety, and sustainability. The book also draws on examples of typical virtual systems, such as tourism, aviation, maintenance, and waste-to-wealth systems, to illustrate the operations management methods discussed. Cases from day-to-day life are used to elicit heuristic questions on the operations management methods presented in each chapter. The book will help researchers, operations managers, and engineers alike to understand the latest advances in operations management methods for analysing complex systems from the standpoint of system engineering.

Advanced Technologies and Methodologies for Risk Management in the Global Transport of Dangerous Goods Chiara Bersani, 2008 In the last few years, logistics has become a strategic factor for development and competition. In fact, research and development activities have traditionally focused on the management of supply chain and international transport, focussing on two main aspects: speed and efficiency. However, several vulnerabilities have recently been highlighted under a safety and security viewpoint. The weakness of the logistic chains has become more evident with the beginning of the new millennium. Terrorist attacks, such as the 11th of September 2001 in the USA, have caused the introduction of new rules and procedures which affect the overall logistics, showing the vulnerability of the global economy. So nowadays, it would appear anachronistic to carry out an exhaustive research activity on the supply chain with no relation to the various typologies of risk which may affect it. This book aims to effectively represent the current status of research on dangerous goods transport.
