Bioremediation Principles:

Bioremediation Principles, 1998 The focus of this new text is the use of biological methods and processes for the remediation of contaminated soils and aquifers Bioremediation is a rapidly changing and expanding area of environmental engineering and this text emphasizes the characteristics of organic compounds and factors which make organics amenable to biological treatment Engineers working in soil and groundwater remediation in general and bioremediation in particular must deal with exacting regulations serious public health issues and a great deal of uncertainty related to knowledge of actual conditions in subsurface systems Professional judgement and integrity are the most important tools in solving most remediation problems Bioremediation Principles will provide a technical foundation for understanding and applying bioremediation concepts rather than serve as a comprehensive handbook for system design Fundamentals and Applications of Bioremediation Robert L. Bioremediation Ronald L. Crawford, Don L. Crawford, 1996-11-21 Industrial and agricultural activity throughout this century has led to considerable contamination of soil and groundwater resources by hazardous chemicals The technique of bioremediation uses living organisms usually bacteria and fungi to remove pollutants from soil and water with minimal disturbance to these environments This approach which is potentially more cost effective than traditional techniques such as incineration of soils and carbon filtration of water requires an understanding of how organisms transform chemicals how they survive in polluted environments and how they can be used in the field This book examines these issues for many of the most serious and common environmental contaminants presenting the most recent position on the application of bioremediation to polluted soil and water

Bioremediation Essam A. Makky, 2012 Over the last three decades there has been increasing global concern over the public health impacts attributed to environmental pollution in particular the global burden of disease The World Health Organization WHO estimates that about a quarter of the diseases facing mankind today occur due to prolonged exposure to environmental pollution Most of these environment related diseases are however not easily detected and may be acquired during childhood and manifested later in adulthood Improper management of solid waste is one of the main causes of environmental pollution and degradation in many cities especially in developing countries Many of these cities lack solid waste regulations and proper disposal facilities including for harmful waste Such waste may be infectious toxic or radioactive Bioremediation is the use of microorganisms for the degradation of hazardous chemicals in soil sediments water or other contaminated materials Environmental Protection Agency EPA uses many methods to clean up pollution at Superfund and other sites Some like bioremediation are considered new or innovative Such methods can be quicker and cheaper than more common methods

Science of Synthesis: Biocatalysis in Organic Synthesis Vol. 3 Kurt Faber, Wolf-Dieter Fessner, Nicholas J.
