How do corporations infuse social meaning into their financing and investment practices? What are the historical, political, and social foundations of currencies? When does money become contested, and are there things money shouldn't buy? What is the impact of the new twenty-first century currencies on our social relations? At a time of growing

Bitcoin Tim Mathis,2017-11-17 Bitcoin is a digital currency created in 2009 that uses decentralised technology for secure payments and storing money that doesn't require banks or people's names It was announced on an email circular as a way to liberate money in a similar way to how the internet made information free Bitcoin works on a public ledger called blockchain which holds a decentralised record of all transactions that is updated and held by all users of the network To create bitcoins users must generate blocks on the network Each block is created cryptographically by harnessing users' computer power and is then added to the blockchain letting users earn by keeping the network running A limit for how many bitcoins can be created is built into the system so the value can't be diluted The maximum amount is just under 21 million bitcoin Scroll to the top of the page and click Add To Cart to learn more about this technology
