Demographic Transition Model

The Demographic Transition Model (DTM) is a model that explains the changes in population growth over time. It is based on the relationship between birth rates and death rates. The DTM is divided into four stages: Stage 1, Stage 2, Stage 3, and Stage 4.

Stage 1

Stage 1 is characterized by high birth rates and high death rates. Because of this, the natural increase rate is close to zero. The population grows slowly because the death rate is high and the birth rate is also high.
