

Medical virology

What is a virus?

- A virus is an **obligate intracellular parasite** (metabolically inert) containing **genetic material** in the form of **single stranded (ss)** or **double stranded (ds)**, **linear** or **circular RNA** or **DNA**, contained within a **coat** or **capsid** made up of a number of individual protein molecules called **capsomeres**.
- The complete unit of nucleic acid and capsid is called the **'nucleocapsid'** and has distinctive symmetry in the form of **icosahedral**, **helical** or **complex** due to the way the capsomeres are arranged.
- The entire virus particle or **'virion'** consists of the **nucleocapsid** surrounded by a **lipid bilayer of host cell origin** into which **virus proteins** and **glycoproteins** are inserted.
- They range from very small (**poliovirus**, at 30nm) to quite large – **vaccinia virus** at 400nm.
